EXPLORATION
SCIENCE

MISSIONS: 6-12 MONTHS
RETURN: HOURS

EARTH RELIANT

MISSIONS: 1-12 MONTHS
RETURN: DAYS

PROVING GROUND

MISSIONS: 2-3 YEARS
RETURN: MONTHS

EARTH INDEPENDENT

ISS Enables Long Duration Exploration

- Human Health and Performance
- Crew Habitability and Logistics
- Technology Test Bed
 - Docking System
 - High Reliability Closed Loop Life Support
 - Long Term System Performance
 - Logistics and Maintenance Reduction
- Commercial Cargo and Crew Transportation Services to LEO
- Commercial Application of Microgravity and Space Research for Terrestrial Application

ISS One-Year Mission

- 2016 marks the return to Earth of astronaut Scott Kelly and cosmonaut Mikhail Kornienko from ISS after 12 months – the longest mission ever assigned to a US astronaut
 - Joint US/Russian ISS research includes studies on: ocular health, immune and cardiovascular systems, cognitive performance testing, and effectiveness of countermeasure against bone and muscle loss
- HRP study of identical twins astronaut Scott Kelly, and retired astronaut, Mark Kelly
 - Provides unprecedented opportunity to research effects of spaceflight on twin genetic makeup, and better understand the impacts of spaceflight on the human body

Plant Growth

Environmental Control
and Life Support Systems

Facilitating Commercial Transportation To Space

**SpaceX
Dragon Capsule**

**Orbital ATK
Cygnus Spacecraft**

Boeing Starliner

Deep Space Systems – Orion and SLS

Beginning human missions beyond low Earth orbit as soon as practicable helps secure our future in space.

EXPLORATION MISSION-1

UNCREWED DISTANT RETROGRADE ORBIT

Our Purpose

Expand human presence into the solar system and to the surface of Mars to advance exploration, science, innovation, benefits to humanity, and international collaboration
