**Committee on the Peaceful  
Uses of Outer Space  
Scientific and Technical Subcommittee  
Fifty-ninth session  
Vienna, 7-18 February 2022  
Item 16 of the provisional agenda\*  
Space and global health**

## **Draft General Assembly resolution on space and global health**

### **Note by the Secretariat**

The annex to this document contains a revised version of the Note prepared by the Chair of the Working Group on Space and Global Health, entitled “Draft resolution on space and global health” (A/AC.105/C.1/L.402), based on discussions in the Working Group on Space and Global Health, including on the Non-paper by the Chair of 9 February 2022, Non-paper – revision 1 of 10 February 2022, and Non-paper – revision 2 of 11 February 2022.<sup>1</sup>

\* A/AC.105/C.1/L.392.

<sup>1</sup> V.22-00559 (E), V.22-00601 (E), and V.22-00649 (E).

## Annex

### Draft resolution

#### Space and Global Health

*The General Assembly,*

*Recalling* its resolutions [51/122](#) of 13 December 1996, [54/68](#) of 6 December 1999, [59/2](#) of 20 October 2004, [66/71](#) of 9 December 2011, [69/85](#) of 5 December 2014, [70/1](#) of 25 September 2015, [71/90](#) of 6 December 2016, [73/91](#) of 7 December 2018 and [76/3](#) of 25 October 2021,

*Also recalling* the recommendations contained in the resolution entitled “The Space Millennium: Vienna Declaration on Space and Human Development”, adopted by the third United Nations Conference on the Exploration and Peaceful Uses of Outer Space,<sup>2</sup> in which participating States called for action to improve public health services by expanding and coordinating space-based services for telemedicine and for controlling infectious diseases,

*Further recalling* the fiftieth anniversary of the first United Nations Conference on the Exploration and Peaceful Uses of Outer Space (UNISPACE+50) and its thematic priority 5, on strengthened space cooperation for global health,

*Acknowledging* the importance of the contribution of space science and technology and their applications to efforts towards the achievement of the 2030 Agenda for Sustainable Development,<sup>3</sup> in particular Sustainable Development Goal 3, on ensuring healthy lives and promoting well-being for all at all ages, and conscious that the work done in the field of space health sector can contribute to sustainable development, especially with programmes aimed at enhancing the quality of life in various ways, including improving human health,

*Emphasizing* that overarching objective 2 of the “Space2030” Agenda,<sup>4</sup> to harness the potential of space to solve everyday challenges and leverage space-related innovation to improve the quality of life, could be attained by strengthening space-related cooperation in support of global health, by improving the use and application of space medicine, science and technology, innovations in the global health domain, cooperation and the sharing of information, including developing mechanism to maintain confidentiality of personal data, and tools to improve research advancement, the timeliness and effectiveness of public health and health-care interventions, and by enhancing capacity-building in space medicine, science and technology,

*Convinced* of the importance and recognizing the existing contributions of space science, space technology and space applications to enhance space life sciences and digital health technologies, such as telehealth, telemedicine<sup>5</sup> and tele-epidemiology, for the prevention and control of diseases and global health issues, the promotion of human health, environmental health, animal health and food sourcing and supply, and the advancement of medical research and health practices, including the provision of health-care services to individuals and communities irrespective of geographical location as a means of promoting equitable, affordable and universal access to health for all,

<sup>2</sup> *Report of the Third United Nations Conference on the Exploration and Peaceful Uses of Outer Space, Vienna, 19–30 July 1999* (United Nations publication, Sales No. E.00.1.3), chap. I, resolution 1.

<sup>3</sup> Resolution [70/1](#).

<sup>4</sup> Resolution [76/3](#).

<sup>5</sup> Telemedicine: This broad term refers to the use of telecommunication, satellite communication and information technology to provide clinical health care from a distance and includes many active and relevant sub-fields such as tele-cardiology, tele-radiology, tele-ophthalmology, tele-oncology, tele-pharmacy, tele-surgery, tele-dermatology, and other developing fields.

*Noting with concern* that among the gaps in the areas of telemedicine and telehealth are the limited uptake of digital technologies in public health systems and healthcare as well as the lack of harmonized data-sharing standards among the various manufacturers of medical equipment,

*Noting with satisfaction* the work of the Committee on the Peaceful Uses of Outer Space, its subsidiary bodies and the Office for Outer Space Affairs of the Secretariat in the area of space and global health, including in the framework of action team 6, on public health, established to implement the recommendations of the third United Nations Conference on the Exploration and Peaceful Uses of Outer Space, as well as the action team 6 follow-up initiative, the Expert Group on Space and Global Health, UNISPACE+50 thematic priority 5, on strengthened space cooperation for global health, and the Working Group on Space and Global Health of the Scientific and Technical Subcommittee of the Committee, and welcoming its report<sup>6</sup> on the work conducted under its multi-year work plan,

*Deeply concerned* about the devastating global effects of emerging infectious diseases and other emergencies with an impact on health, including the coronavirus disease (COVID-19) pandemic, to the detriment of human life, society and development, and urging the international community to embrace a One Health approach by strengthening the role of space-based solutions, in particular telehealth, in monitoring, preparedness and response activities,

1. *Encourages* United Nations entities, intergovernmental organizations, Governments and the private sector to pursue effective coordination in all key space activities relevant to global health;

2. *Encourages* formalized cooperation between health authorities and space authorities at the domestic level, and welcomes existing cross-sectoral networks that foster the exchange of ideas between the space and health sectors;

3. *Encourages* Member States to establish a policy-enabled environment and governance mechanisms, with due consideration of legal and ethical issues, for removing barriers to the effective use of space-based technologies, including telemedicine solutions and other emergent technologies;

4. *Also encourages* Member States to promote open data-sharing policies and participatory approaches to developing and improving access to all geospatial information relevant to global health, including remote sensing and Earth observation data, whenever possible;

5. *Further encourages* Member States to enable organizational and technical interoperability and promote research and innovation activities to facilitate the development and implementation of space-based science and technology in the health sector;

6. *Urges* United Nations entities and intergovernmental organizations to support the wider development of, equitable access to and application of space solutions for global health, public health, including epidemics and pandemics, emergencies that may have an impact on health, and the individual health needs of Member States, and encourages the implementation of a broader range of space solutions for sustainable development, including public-private partnerships;

7. *Encourages* Member States and participating entities to advance their efforts related to the geotagging of all assets relevant to health systems, including health information systems, and to make them available to further the attainment of health goals;

8. *Encourages* Member States to recognize the relevance of accessing the space environment and space analogues<sup>7</sup> for health and life sciences research and

<sup>6</sup> A/AC.105/C.1/121

<sup>7</sup> Space analogues (e.g., parabolic flights, bed rest studies, Antarctica, and other isolated, confined, extreme (ICE) environments which simulate the space environment on Earth)

development, especially in the area of astronaut health for social and economic benefit on Earth;

9. *Encourages* Member States to actively promote international cooperation in the field of space medicine on the basis of equal opportunities for all interested participants in the interests of humankind's further exploration of outer space, and also the creation of a scientific and technological base for further development and application in the interests of global health;

10. *Encourages* Member States to conduct appropriate drills and exercises to benchmark their operational preparedness and response capacities and capabilities for the appropriate use of space technologies in responding to global health events;

11. *Welcomes* the establishment of a dedicated, cooperative, globally accessible, multifaceted platform based in Geneva to promote effective collaboration on space and global health issues among Member States, United Nations entities, other international organizations and relevant actors;

12. *Emphasizes* that all key activities, reference documents and plans relevant to space for global health carried out or prepared by United Nations entities should be monitored and compiled on an annual basis, including those of the World Health Organization, other international organizations and States members of the Committee on the Peaceful Uses of Outer Space, as well as, to the extent possible, non-governmental organizations and other non-governmental actors, and also emphasizes that the resulting annual compilation of activities should serve as a reference to identify and discuss gaps and opportunities and should be shared broadly in an effort to raise awareness and promote cooperation among relevant actors in this domain;

13. *Recognizes* the importance of analysing and assessing the roles and interests of current actors in the domain of space and global health, with the aim of promoting synergy, complementarity, cooperation and coordination among all actors;

14. *Emphasizes* the need to enhance, in an equitable and sustainable manner, intersectoral coordination and cooperation for effective international, regional, national and subnational capacity-building activities relevant to the application of space science and technology in the field of global health;

15. *Encourages* Member States to engage learning institutions and other capacity-building mechanisms in motivating young health professionals, at an early stage, to acquire space-related skills and abilities;

16. *Agrees* to promote capacity-building events, to be organized by United Nations entities and other relevant actors, with the objective of further promoting awareness of and engagement with regard to the important contribution of space science and technology among actors applying One Health approaches, with a view to increasing the number of organizations and other actors in the health domain that are actively engaged in using space science and technology.

17. *Requests* the Office for Outer Space Affairs to strengthen, within existing resources, capacity building and networking in Africa, Asia and the Pacific, Latin America and the Caribbean, through regional technical cooperation projects and to support field projects for strengthening collaboration between the space and global health as an efficient strategy to improve the use of space science and technology for global health access of beneficiary states and to take better advantage opportunities offered by bilateral or multilateral collaboration.

18. *Encourages* Member States to foster linkages between academia, national experts, telecommunication regulatory authorities, and science and technology authorities to improve the access and use of digital technologies and information systems in health care.
