How Can We Solve the Problem?

The nature of smart city : leverage advanced **digital technologies** to intelligently **interconnect** physical infrastructure, public services, industry verticals, and other relevant **data sources** to resolve various urban challenges.

FutureCity: To empower the Smart City with the ability of precise **PNT(Positioning Navigation and Timing)** through the BDS-GNSS precise positioning service;
Supplement of traditional Smart City without data of precise PNT information.

Digital Twin

Cognitive Perception
Multi-dimensional awareness

Reasoning
Real-time decision making

Strategic Decision-making
Situational Intelligence

Machine Learning
Perpetual innovation

Reality World

Full coverage

Full Features

High Precision

Real Time-Dynamic

Precision Linking and mirrored

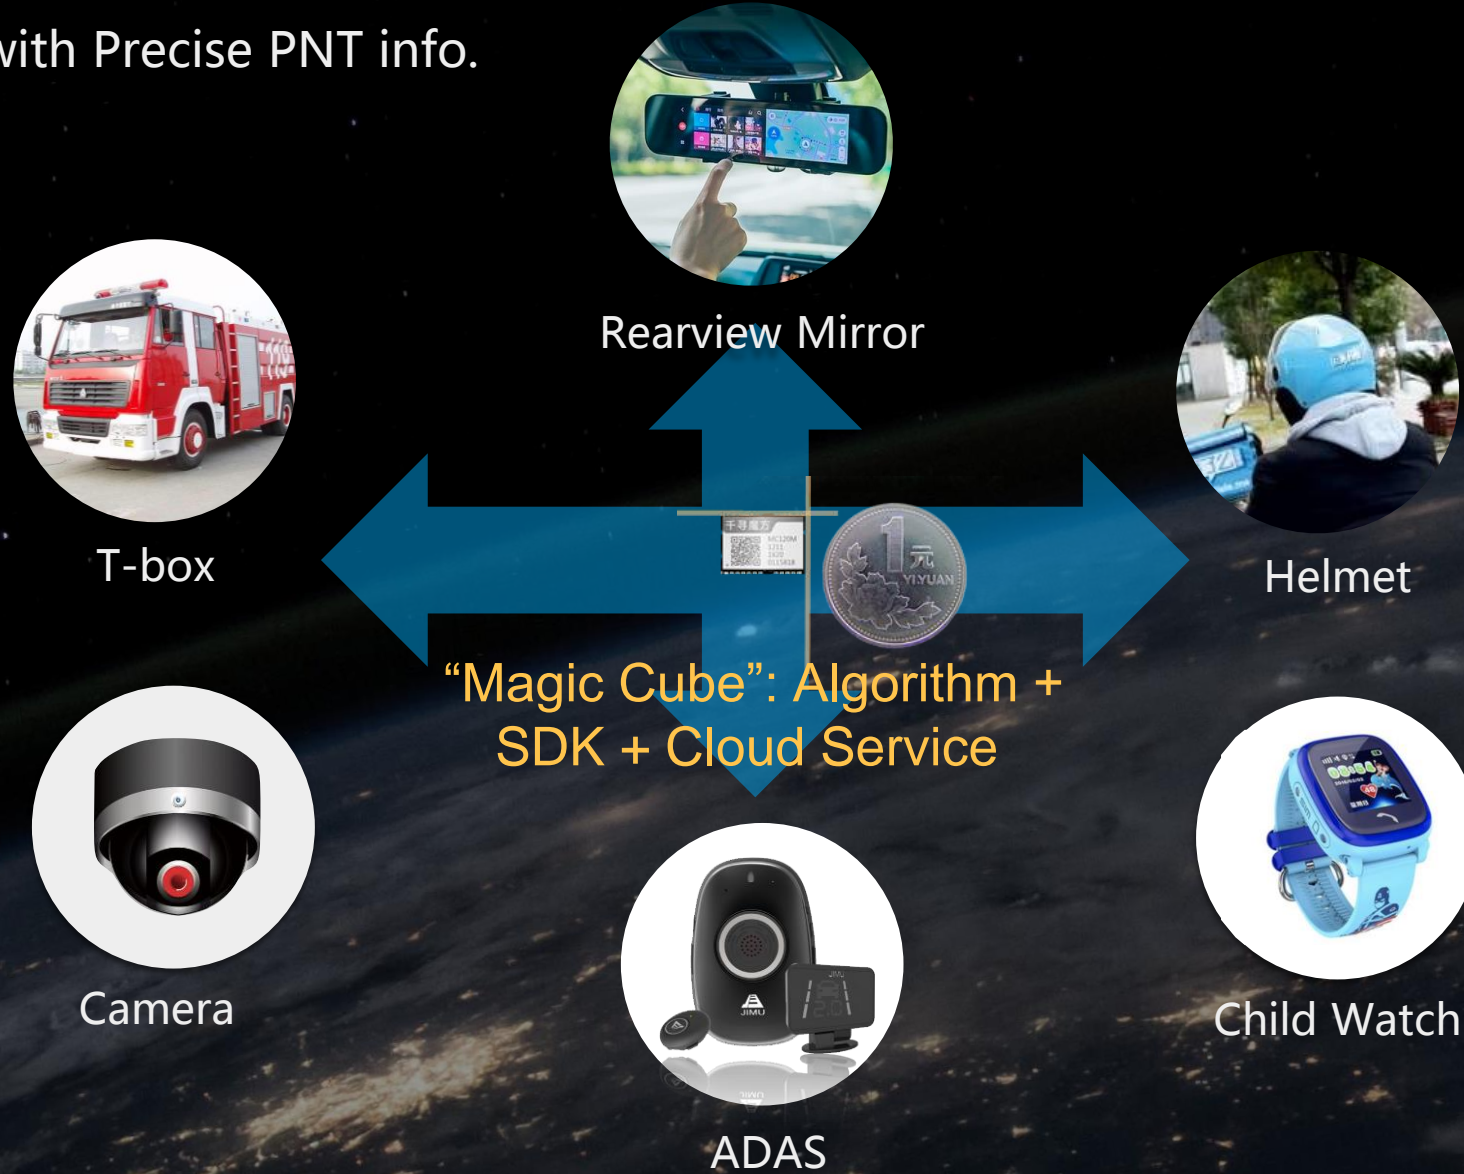

1st Step :

Under a unified time and coordinate system , we try to mirror the city in the digitalized world: full coverage, full features, real-time dynamic description so that these digitalized data can be processed the City Brain from Alibaba Cloud.

2nd Step :

IoT technology binds smart networks of buildings, vehicles, homes, and other commercial devices to exchange and aggregate data. The multitude of data collected via IoT sensors is more accurate with Precise PNT info.

Camera + GNSS Module=High Precision Timing and Positioning Camera

Positioning Accuracy : Decimeter
Decentralized Time Stamping : 30 nanoseconds
