

U.S. ARMY MEDICAL RESEARCH & MATERIEL COMMAND

Major Gen. Eric B Schoomaker, Commanding

# *HealthGrid: Grid Technologies for Biomedicine*

Mary Kratz

Advisor to the Director, HealthGrid  
*United Nations/Zambia/European Space Agency  
Regional Workshop on the Applications of GNSS  
28 June 2006*

Telemedicine & Advanced Technology Research Center

*Cutting Edge Medical Technology*

*Col. Jeffrey Roller, MD, Director*

*“Insanely great ideas are our number one priority”*

**Thank you!**

# Agenda

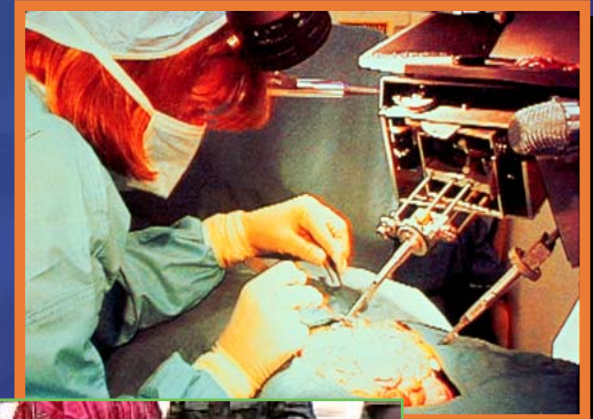

- Telemedicine Advanced Technology Research Center (TATRC) organization
- HealthGrid: Grid Technologies for Biomedicine
- Biomedical ICT Applications for GNSS in Sub-Saharan Africa
- Future opportunities

# TATRC Mission

Telemedicine & Advanced Technology Research Center  
*Cutting Edge Medical Technology*

Apply physiological and medical knowledge, advanced diagnostics, simulations, and effector systems integrated with information and telecommunications for the purposes of enhancing operational and medical decision-making, improving medical training, and delivering medical treatment across all barriers.

The program scope is to identify, explore, and demonstrate key technologies and biomedical principles required to overcome technology barriers that are both medically and militarily unique.

# Real Medical Technology ... For The Real World

BMIS-T

Chest Tube Simulator

Digital X-ray

Dreams Digital Ambulance

Smallpox Inoculation

Medical Robotics

BRSS

STAT-Care

Retinal Imaging

**TATRC is a network of public-private partnerships working together to improve military-civilian healthcare.**

# Let's talk Grid and Biomedical

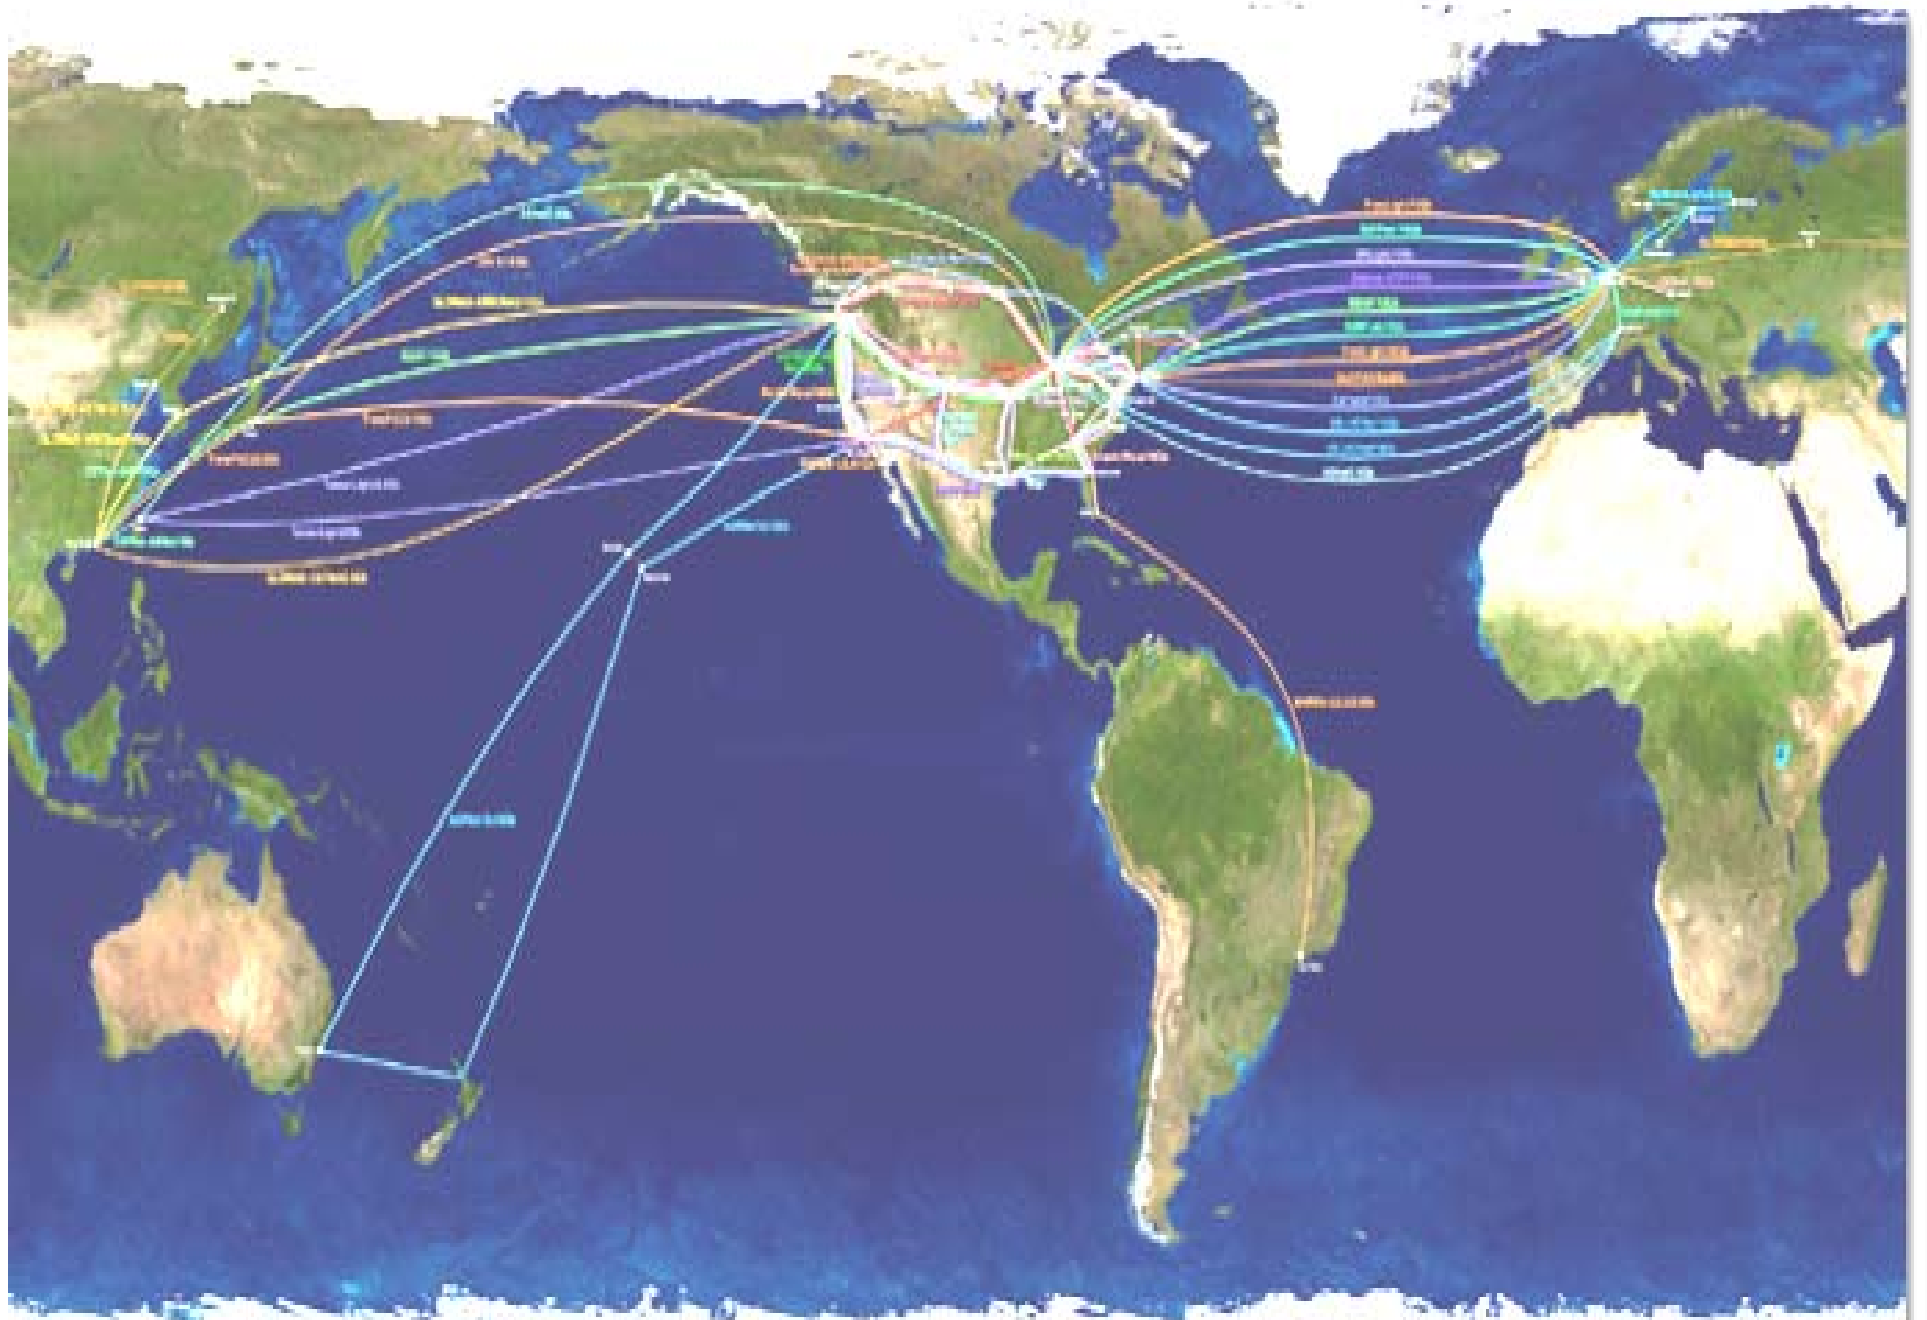

Technical  
architecture  
for scalable  
secure  
interoperable  
information

# Value of HealthGrid

- Wide area communication
  - Networks finally have enough bandwidth
  - Networks are the 21<sup>st</sup> Century highway system
  - Analogy of road system in 19<sup>th</sup> Century
- Access to Data Resources
  - Complexities of interaction has caused a data tsunami
  - Future is mobile device fusion
    - Circuit density + network capacity
    - RFID/Nanotechnologies/biosensors

# Bandwidth and Data

|               |  |
|---------------|--|
| Megabyte (Mb) | Book   |
| Gigabyte (Gb) | DVD<br>Truck full of paper with a whole lot of latency                   |
| Terabyte (Tb) | 1 million books<br>All the text in the U.S. Library of Congress (\$1000) |
| Petabyte (Pb) | All us.edu library holdings<br>One fMRI brain image 4.5 Pb               |
| Exabyte (Eb)  | All the works ever spoken in the history of humanity                     |

# Digitization of Biomedicine

## Moore's Law

Transistors per chip  
In millions

# Internet Hosts

## High-income countries

16% population  
7% burden of disease  
89% health spending  
94% Internet hosts

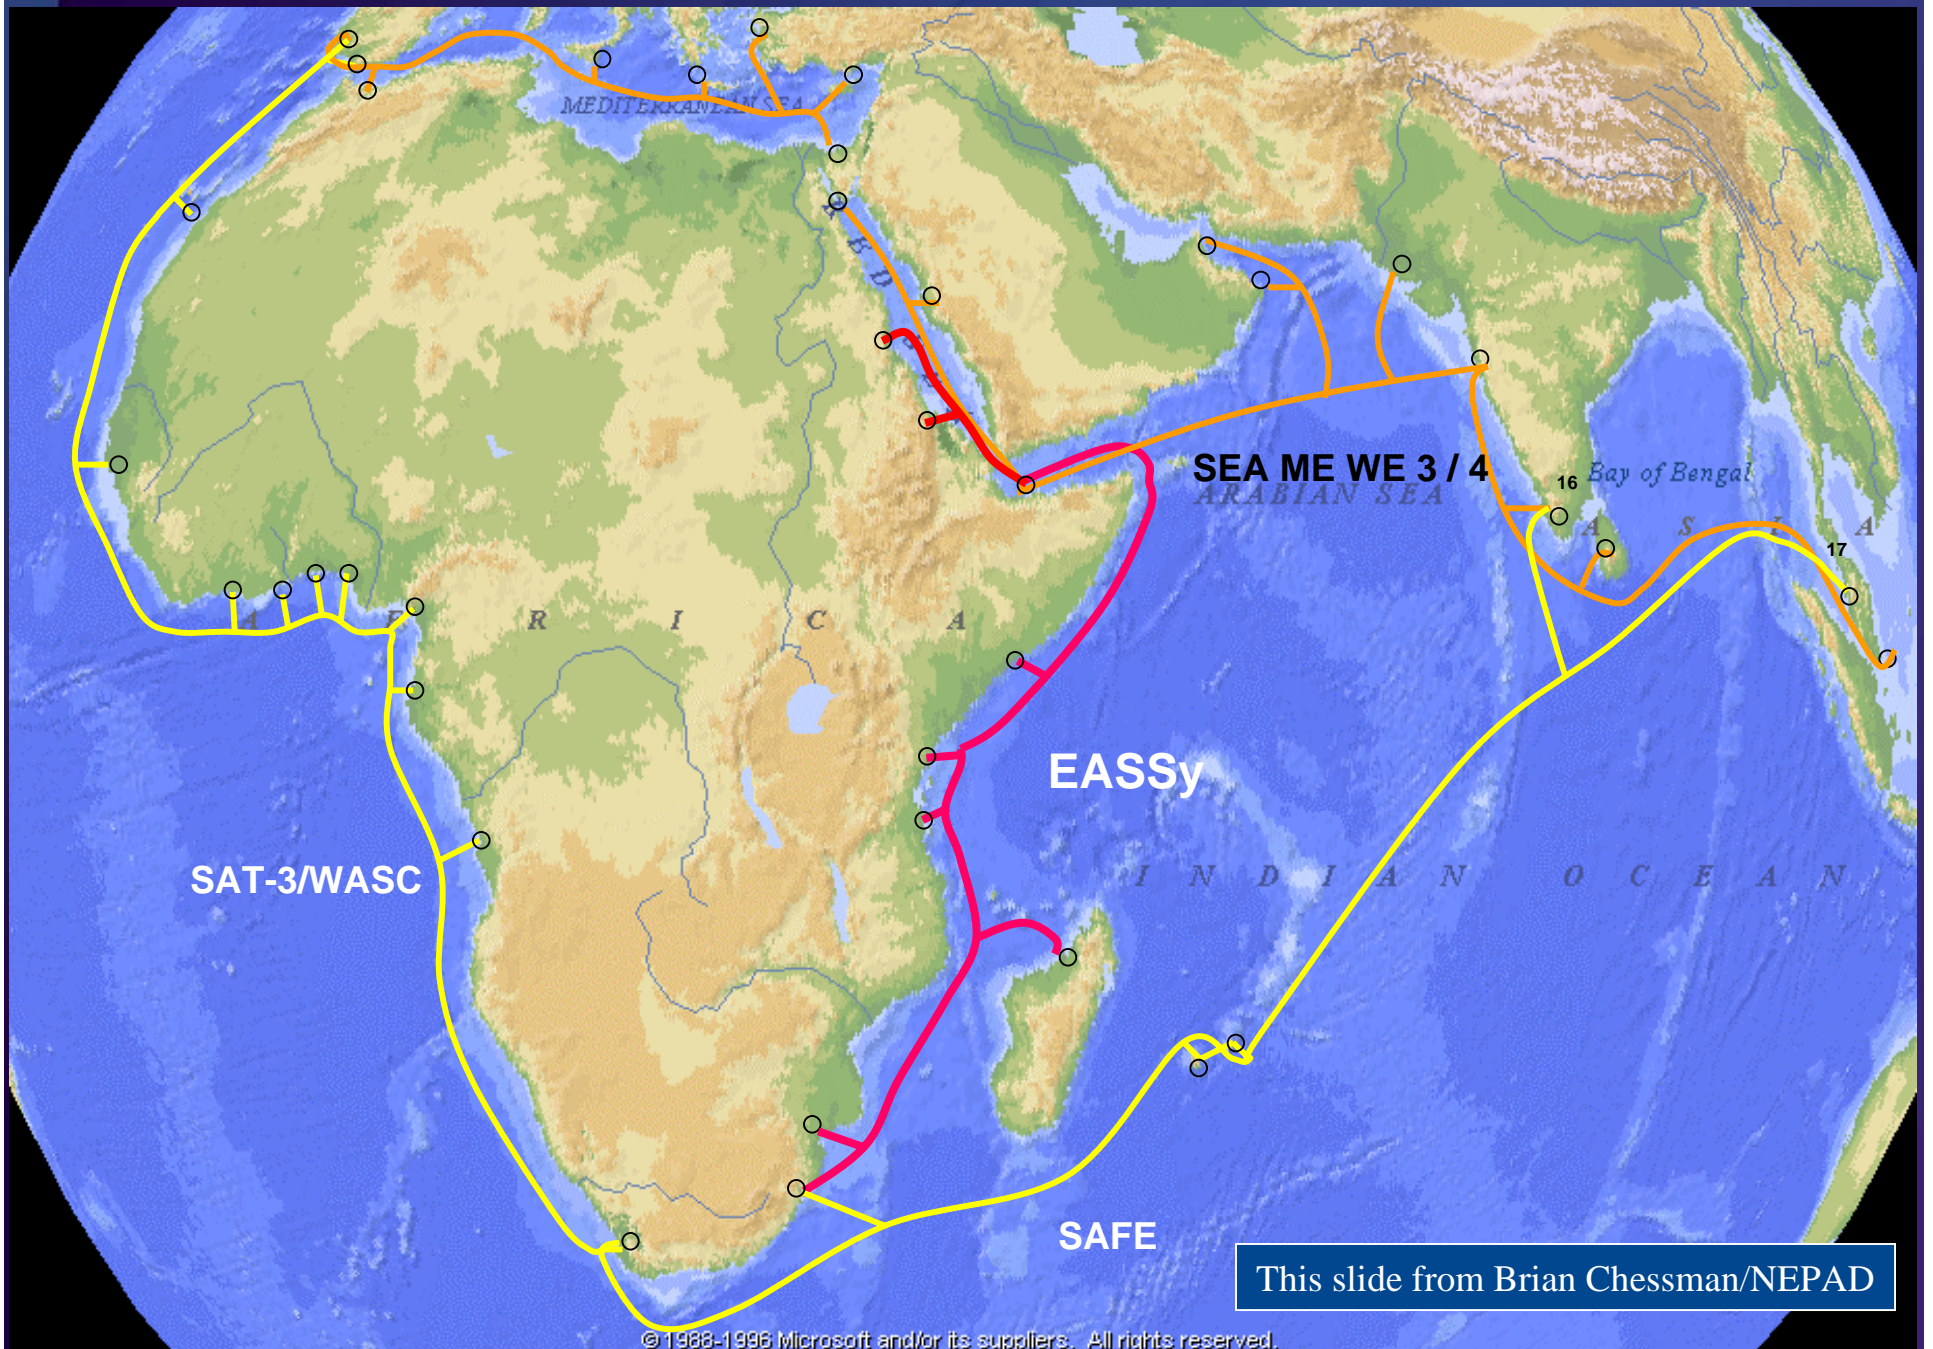

## Low-income countries

84% population  
93% burden of disease  
11% health spending  
6% Internet hosts

# EASSy – GLOBAL PERSPECTIVE

# TATRC/PEPFAR Ethiopia Project

- Key Issue Inability to access information
  - Continuity of care/data management
  - Build human capacity
  - Logistics management
- Technology needs
  - Portable Electronic Health Record
  - Wireless mesh network/self-powered data transmission
  - Remote Video Teleconferencing
  - Inventory tracking/RFID

# TATRC Interagency Agreement with PEPFAR

- President's Emergency Plan for AIDS Response
  - Health and Human Services (CDC)
  - Department of Defense
  - Peace Corp
  - USAID
- Applied operational research to move technology innovation into practice

# Landscape Epidemiology Technologies

- Learning Resource Centers
- BMIST
- Remote self-powered wireless networking infrastructure
- Easy to use, field-deployable clinical devices

# Learning Resource Centers: Human Capacity Building

- Books to electronic media
  - Words to pictures to streaming media (video)
- Procedural simulation
  - Plastic head phantom for dentistry/anesthesiology
  - Phlebotomy
- Manikins with computer based physiological systems
  - Team learning
- Virtual Reality
  - 3D visualization
  - Computer Games

# Video for remote learning

- Collaboration Grid

# Procedural Based Learning

# Team based learning - with manikin

- Patient under anesthesia lapses into cardiac arrest

# Virtual Emergency Room

# Landscape Epidemiology Technologies

- Learning Resource Centers
- **BMIST**
- Remote self-powered wireless networking infrastructure
- Easy to use, field-deployable clinical devices

# Battlefield Medical Information System Tactical (BMIST-J)

Joint Force Health Surveillance

Electronic Health Record

Special Operations Forces Medical Handbook  
May 2001

Medical References

Blast Injury decision support

Wireless patient monitoring

- Provides all-in-one suite of mobile applications that empower providers via access to critical medical information and powerful clinical & decision support tools to accurately create an electronic health record.
- Synchronizes with Joint health surveillance and medical information systems from the earliest echelons through chronic care provided by the Veterans Administration

Top Tem Army's  
Greatest Invention

BMIST-J is the approved Joint solution for the Department of Defense surveillance need at the forward area of care with more than 10,000 in use world-wide

# Mobile CAC Card Reader

- Interface can be enabled

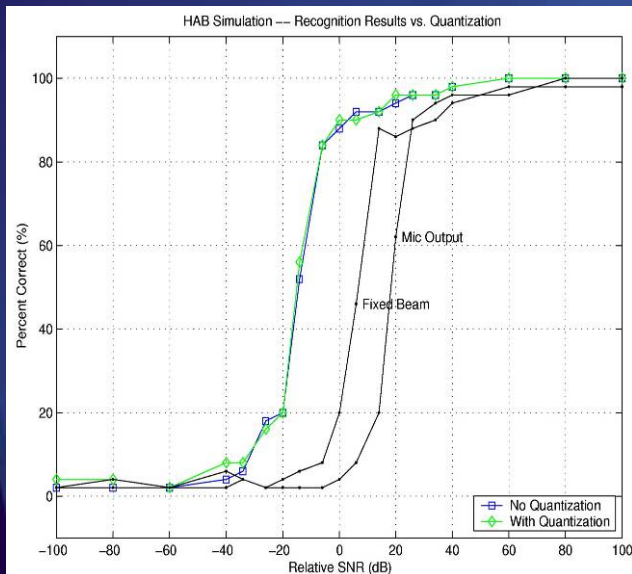

Smart Card reader compatible with ISO 7816 smart cards, including US DoD Common Access Card (CAC)

# Speech Capable PDA (SCPDA)

- Provides Basic Hybrid Adaptive Beam forming Array (HAB) to PDA

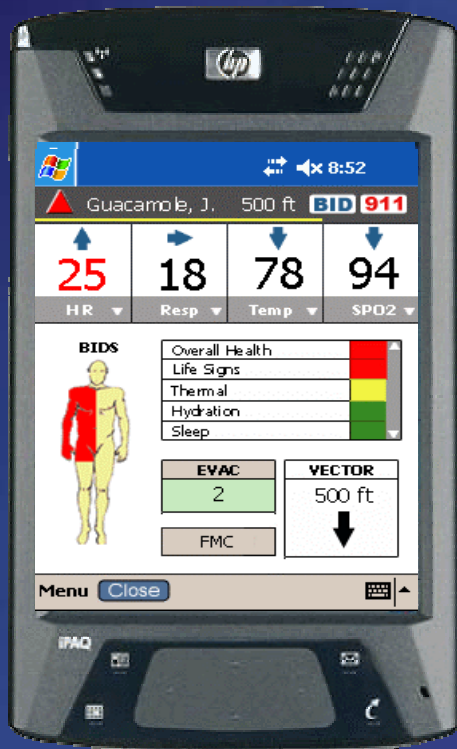

- Enable first responder Army medics to input, control, store, and retrieve medical data via speech in high-noise environments using a portable computer platform

Planning Systems Inc.

# Wireless Sensors

- Multiple patient monitoring
- Multimedia electronic health record

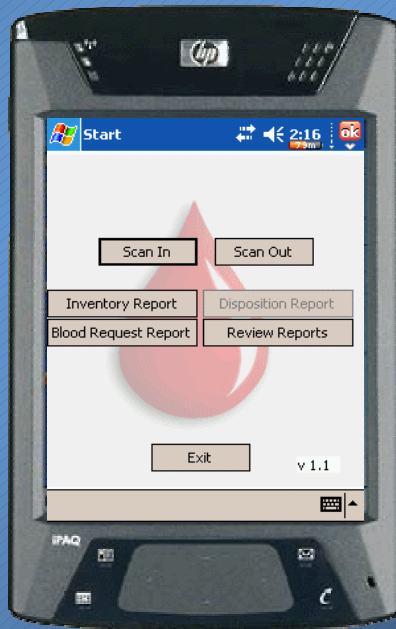

# Blood Information Program (BIP)

Built on the BMIST Architectural Standard

Better Quality of Care

Imbedded  
References

Wireless inventory System

- Provides all-in-one suite of mobile applications that empower blood teams via access to critical information and powerful decision support tools to manage blood inventories
- Includes:
  - Blood Inventory Program
  - Blood report generator
  - Transfusion/Disposition Module

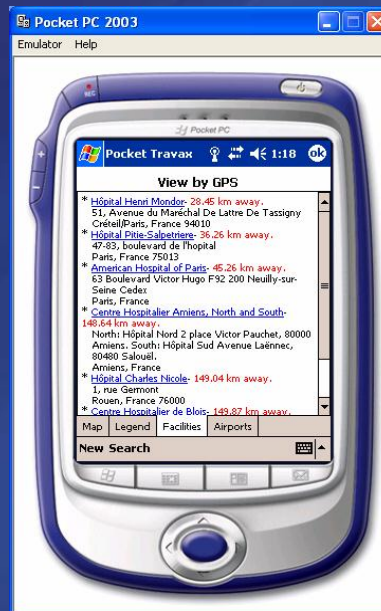

Army's Greatest  
Invention

BIP is currently be used by our blood teams worldwide

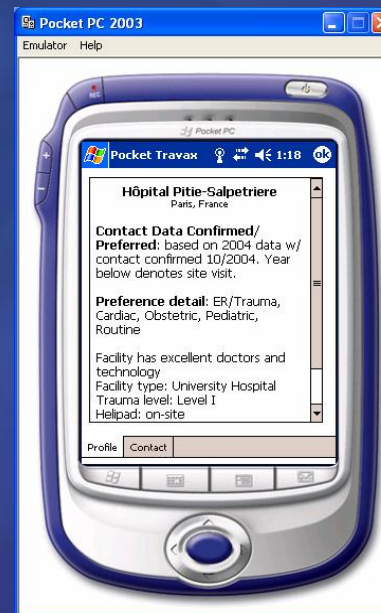

# Pocket TRAVAX

Nearby hospitals and airfields are displayed in relation to your location.

Hospitals are listed in order nearest to you

Hospital description  
Contact information &  
GPS location

- Pocket Travax is a handheld tool that allows users to locate hospitals or clinic that can provide needed emergency services by country location or GPS coordinates

- Providing travelers information for medical emergencies

- Eventually provide dynamic/real-time local capabilities data

# Landscape Epidemiology Technologies

- Learning Resource Centers
- BMIST
- Remote self-powered wireless networking infrastructure
- Easy to use, field-deployable clinical devices

# InteleCell™ - Wireless Sensor Device

- Remotely deployable, **rugged smart sensors** monitor many locations:
  - Sensor: Water, air, weather, soil, video, biosensors
  - Processor: Small, low power computer, can control devices/actuators
  - Wireless: Up to 14 miles between stations (40 miles directional), **sensor network can cover hundreds of miles**
  - **GPS-Enabled**: automatically knows location, sensors can be mobile
  - Uplink: Local Internet, Cellular, Satellite
- **Any sensor** (analog, digital, serial, ...) **easy to integrate**
  - Many labs developing new sensors- we make it easy to deploy and integrate these devices and *get them out of the lab and into the field*
  - Typically deploy nonspecific, continuous, low-cost simple physical sensors (*change detectors*), then use specific tests when anomaly detected
  - **Currently designing cheap, specific biochemical sensor module- rugged, sensitive/specific, multiagent, reusable**
- **Secure** transmission: Authentication + Encryption (256-bit AES)
- Frequency: **Transmit on-schedule, on-event, on-demand**
- **Future-proof**: Remotely upgradeable while deployed in the field
- Advanced power management:
  - **Self-Powered** (*3 years without recharge, indefinite with solar recharge*)

# IntelNet Overview- Limahuli Testbed

Latitude: 22.20139°  
Longitude: -159.56331°  
Heading: 174.82°  
Tilt: 75.23910°  
Altitude: 1715m  
Distance: 7388m  
FOV: 45.00000°  
Terrain Elevation: 230.00 meters
