

**United Nations/United Arab Emirates/United States of America
Workshop on the Applications of
Global Navigation Satellite Systems**

**Satellite-based navigation systems
and their application in Kyrgyz
Republic**

Azamat Dyikanbaev

**Leading expert of electromagnetic compatibility analysis department
State Communication Agency under the
Government of the Kyrgyz Republic**

Satellite based location technologies

- GPS
- A-GPS
- GALILEO
- GLONASS

Navigation: How can I go there? DIRECTION from my position to another location

«Position: Where am I?
Name THIS location»

«Proximity information:
What is nearby? Name a
FEATURE'S location near my
position»

◆ Navigation Technologies - Present

- Primary
 - GPS (USA)
 - GLONASS (Russia)
- Secondary
 - WAAS (USA)
Partially operational
 - EGNOS (Europe)
Deployed, not operational
 - MSAS (Japan)
Deployed, not operational

Navigation Technologies - Future

- Primary
 - Modernized GPS (USA)
 - Modernized GLONASS (Russia)
 - Galileo (Europe+India+China+)
 - QZSS (Japan)
 - IRNSS (India)
- Secondary
 - WAAS (USA)
 - LAAS (USA)
 - EGNOS (Europe)
 - MSAS (Japan)
 - GAGAN (India)

Global Positioning System

GPS Defined

GPS is a space-based radio navigation and timetransfer system capable of providing navigation

data to users on or near the surface of the Earth

any-time, any-where and under any-weather

conditions with immunity to intentional/unintentional jamming

GPS History

1969—Defense
Navigation Satellite
System (DNSS) formed
1973—NAVSTAR Global
Positioning System
developed
1978—first 4 satellites
launched
Delta rocket launch

Three Segments of GPS

Space Segment

User Segment

Control Segment

Ground Antennas

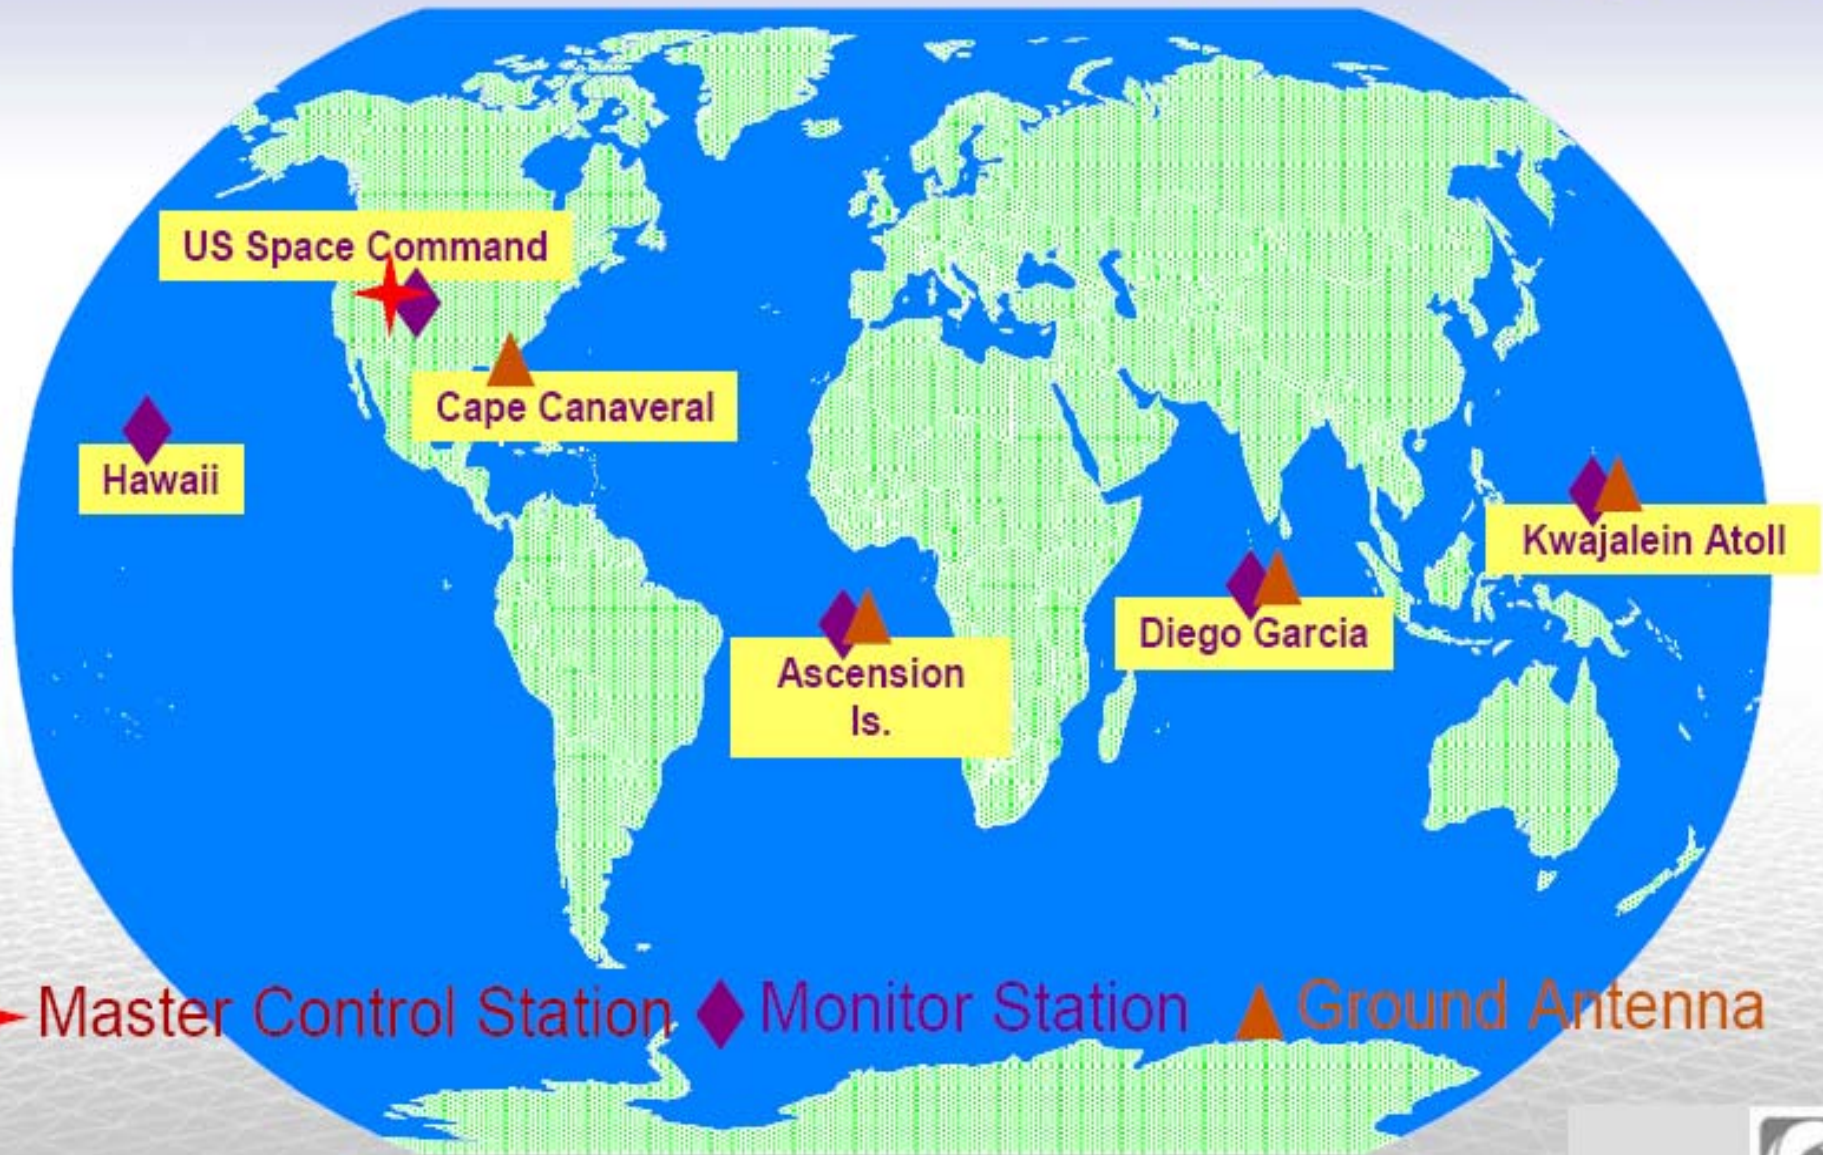

Monitor Stations

Ltd.

Control Segment

GPS Architecture – Control Segment

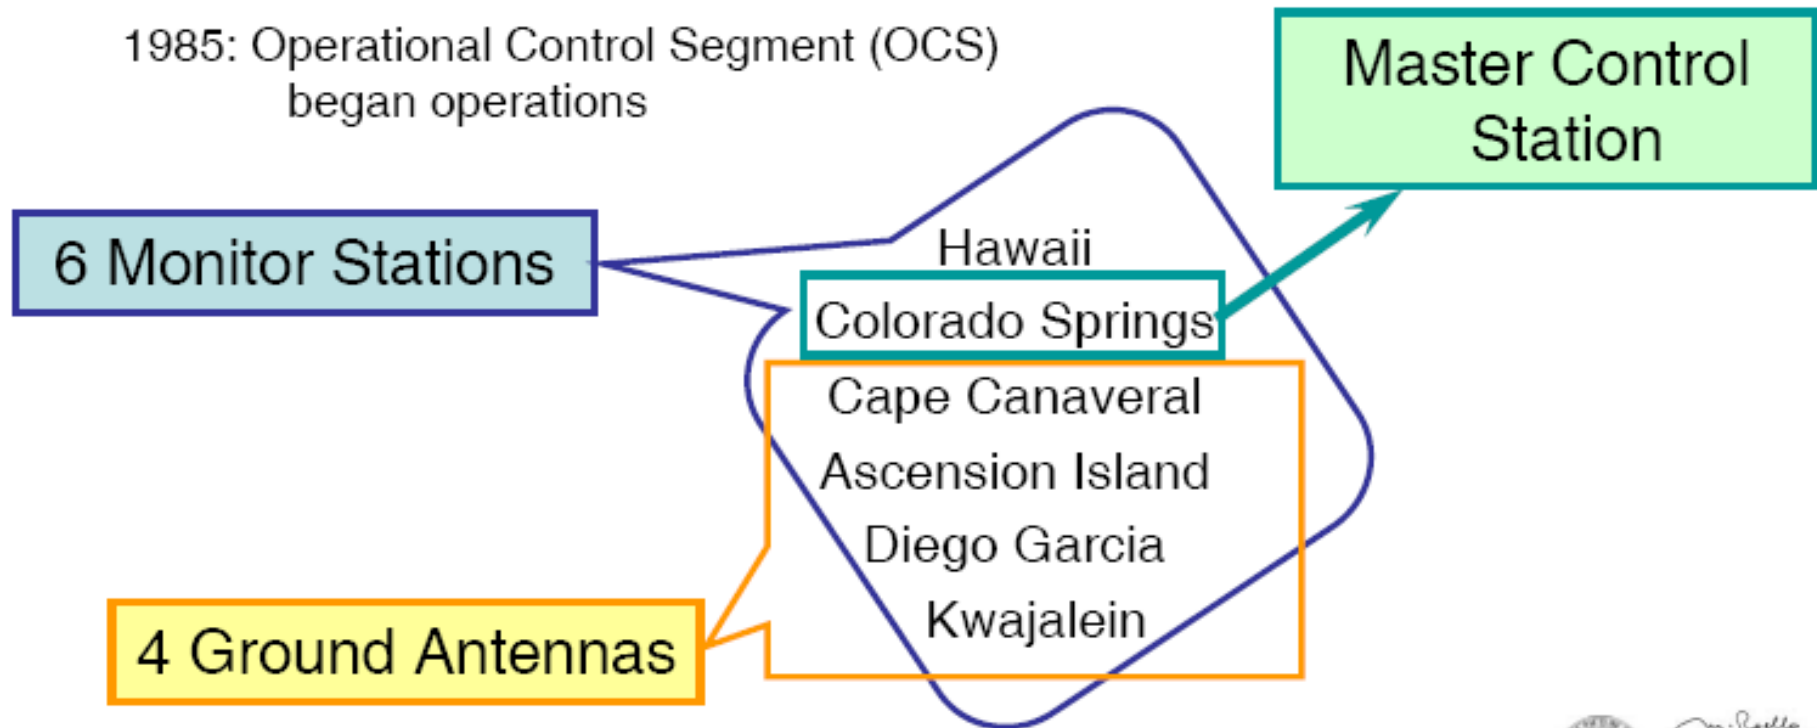

www.navsas.eu

Objectives:

1. Maintain each satellite in its proper orbital position (**station keeping**)
2. Make **corrections and adjustments** to the satellite clocks and payload
3. **Track** the GPS satellites, generate and **upload** the navigation data to each satellite
4. Command **major relocations** in the event of satellite failure to **minimize the impact**

1985: Operational Control Segment (OCS)
began operations

Space Segment

GPS Constellation

- 24 satellites (Space Vehicles or SVs)
- 20,200km altitude (12 hour orbit period)
- 6 orbital planes (55° inclination)
- 4 satellites in each plane

Peter H. Dana R122/RR

GPS Nominal Constellation
24 Satellites in 6 Orbital Planes
4 Satellites in each Plane

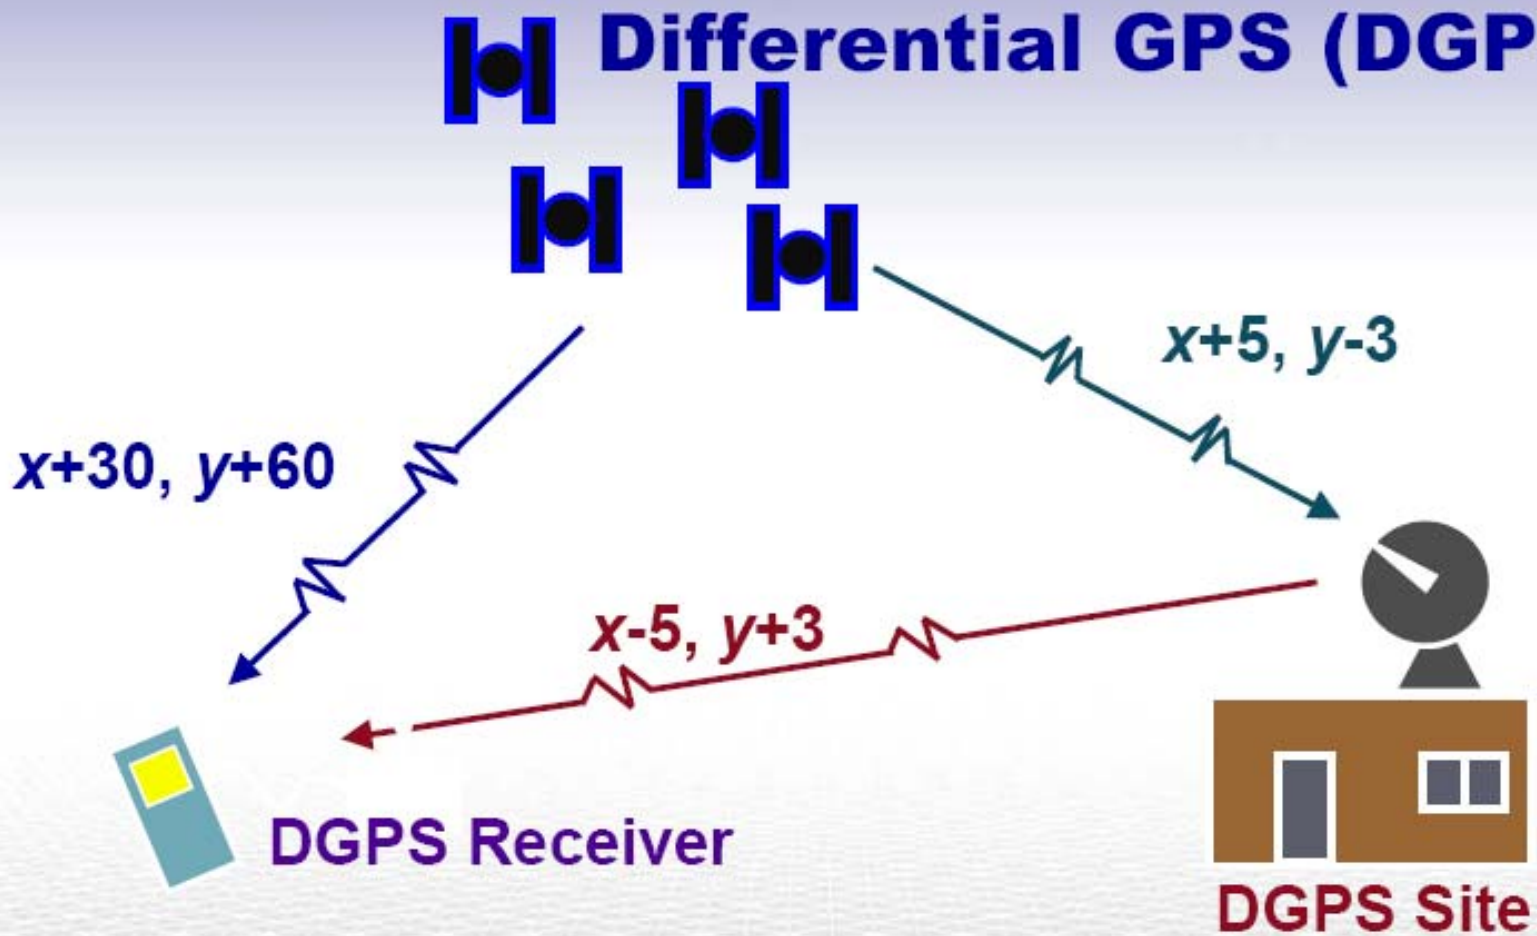

20,200 km Altitudes, 55 Degree Inclination

User Segment

Differential GPS (DGPS)

DGPS correction = $x+(30-5)$ and $y+(60+3)$

True coordinates = $x+25, y+63$

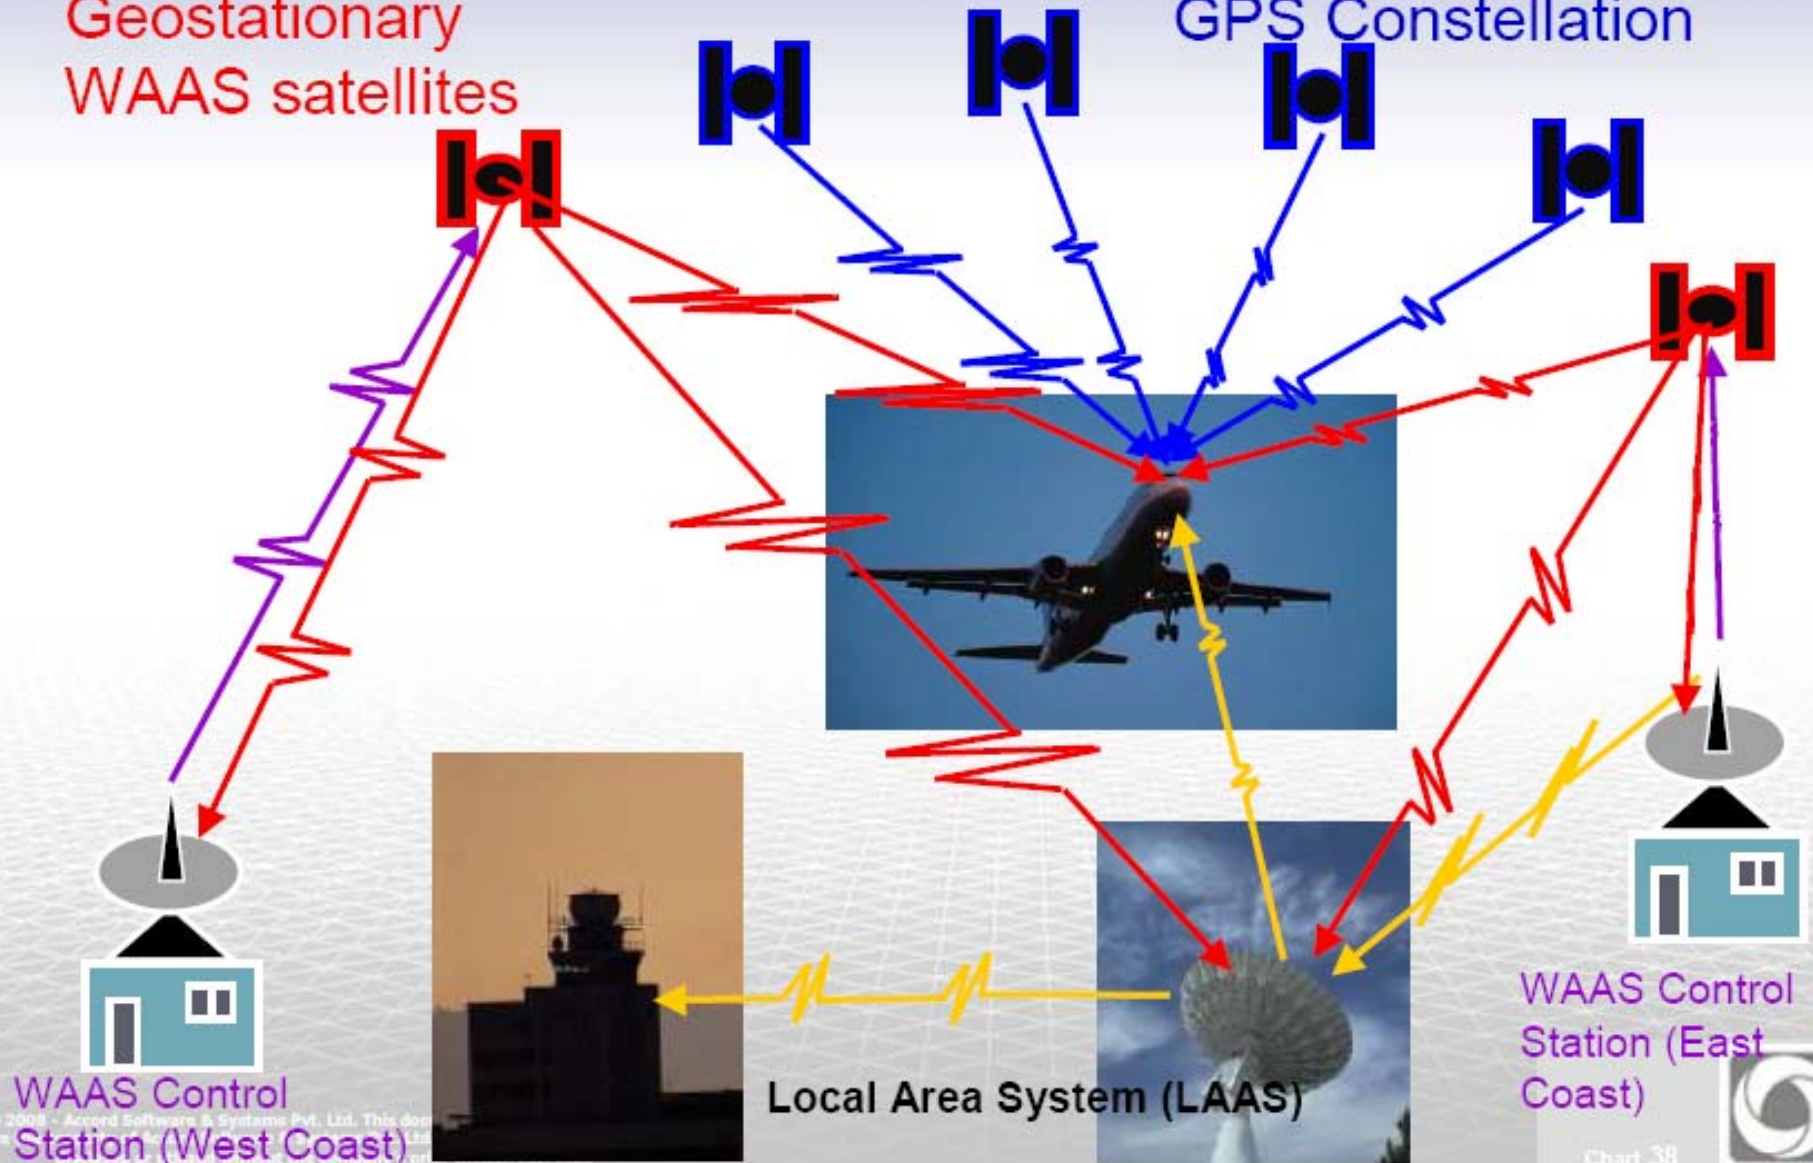

True coordinates = $x+0, y+0$

Correction = $x-5, y+3$

WAAS/ EGNOS/ MSAS

GPS Constellation

Geostationary
WAAS satellites

WAAS Control
Station (West Coast)

Local Area System (LAAS)

WAAS Control
Station (East
Coast)

INRES -> Indian Reference Station
INLUS -> Indian Land Uplink Station

GAGAN

GLONASS

- GLONASS is Russian equivalent of GPS
- First a launched in 1982
- FDMA technique is used
- Satellites are at 65 deg inclination and at 19 thousand KM orbit

GALILEO

- Galileo is European equivalent of GPS
- A total of 30 satellites are planned
- Satellites shall be placed at 23616 km orbit
- The first experimental satellite is launched in January, 2006

Comparison of GNSS Systems

GPS

GALILEO

GLONASS

- 6 orbital planes
- 24 satellites + spare
- 55° inclination angle

- 3 orbital planes
- 27 satellites + 3 spare
- 56° inclination angle

- 3 orbital planes
- 21 satellites + 3 spare
- 64.8° inclination angle
- altitude 19100 km

LBS

(Location Based Services)

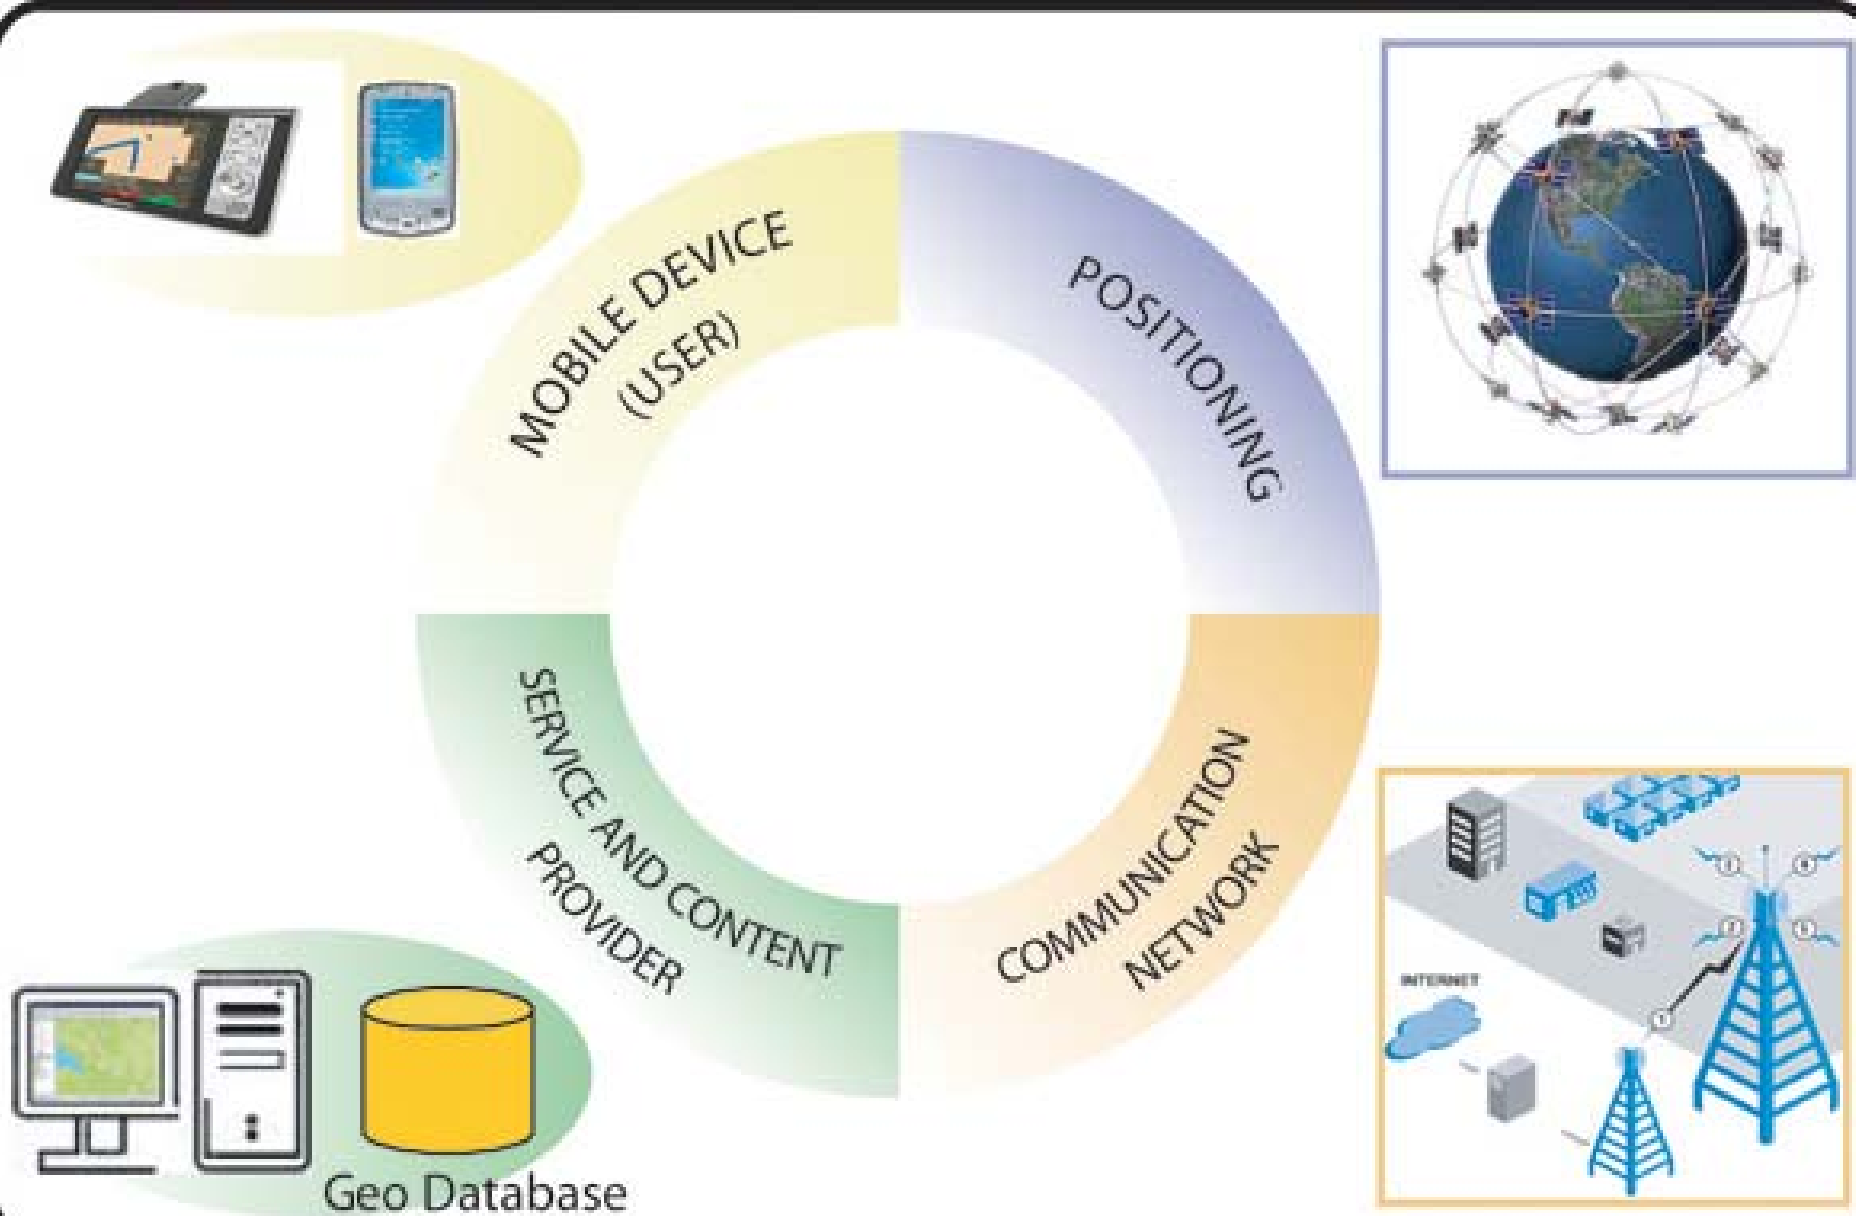

LBS

What is LBS?

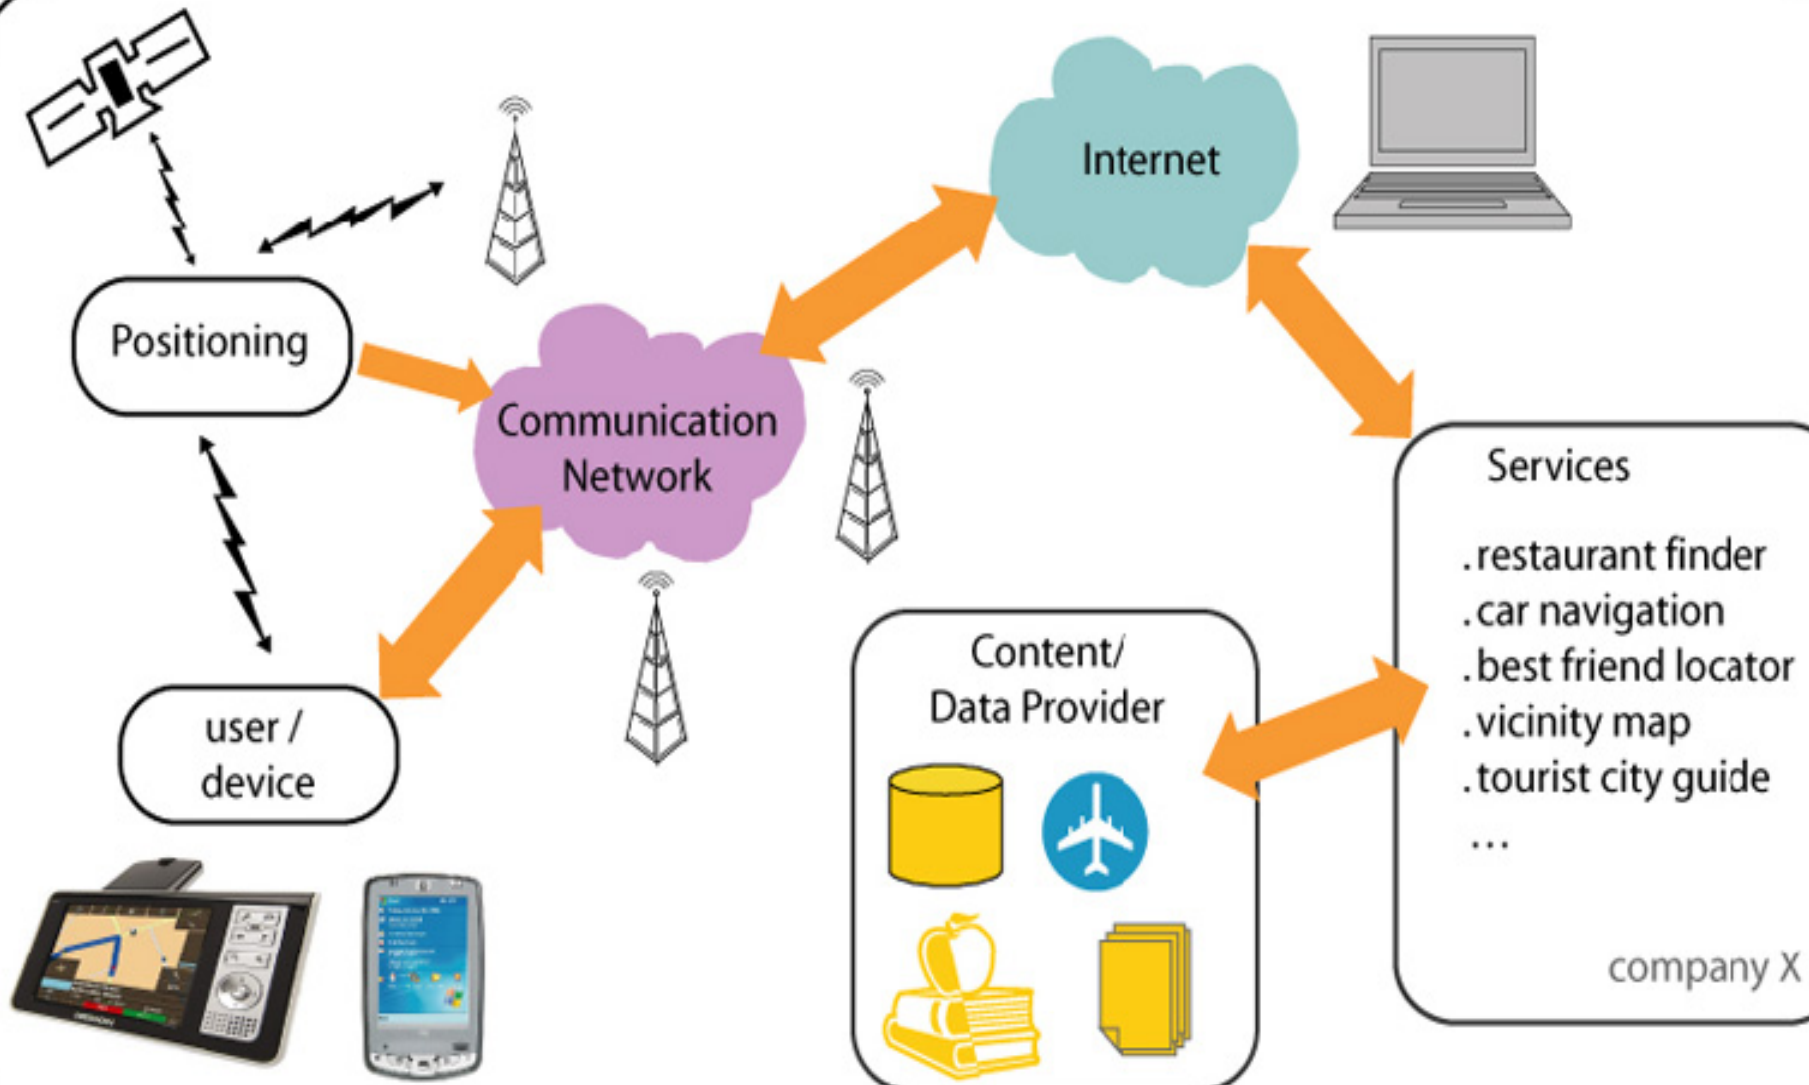

- Information services accessible with mobile devices
- Through mobile wireless network
- Presenting mobile device position by using GIS for an application

Components of LBS

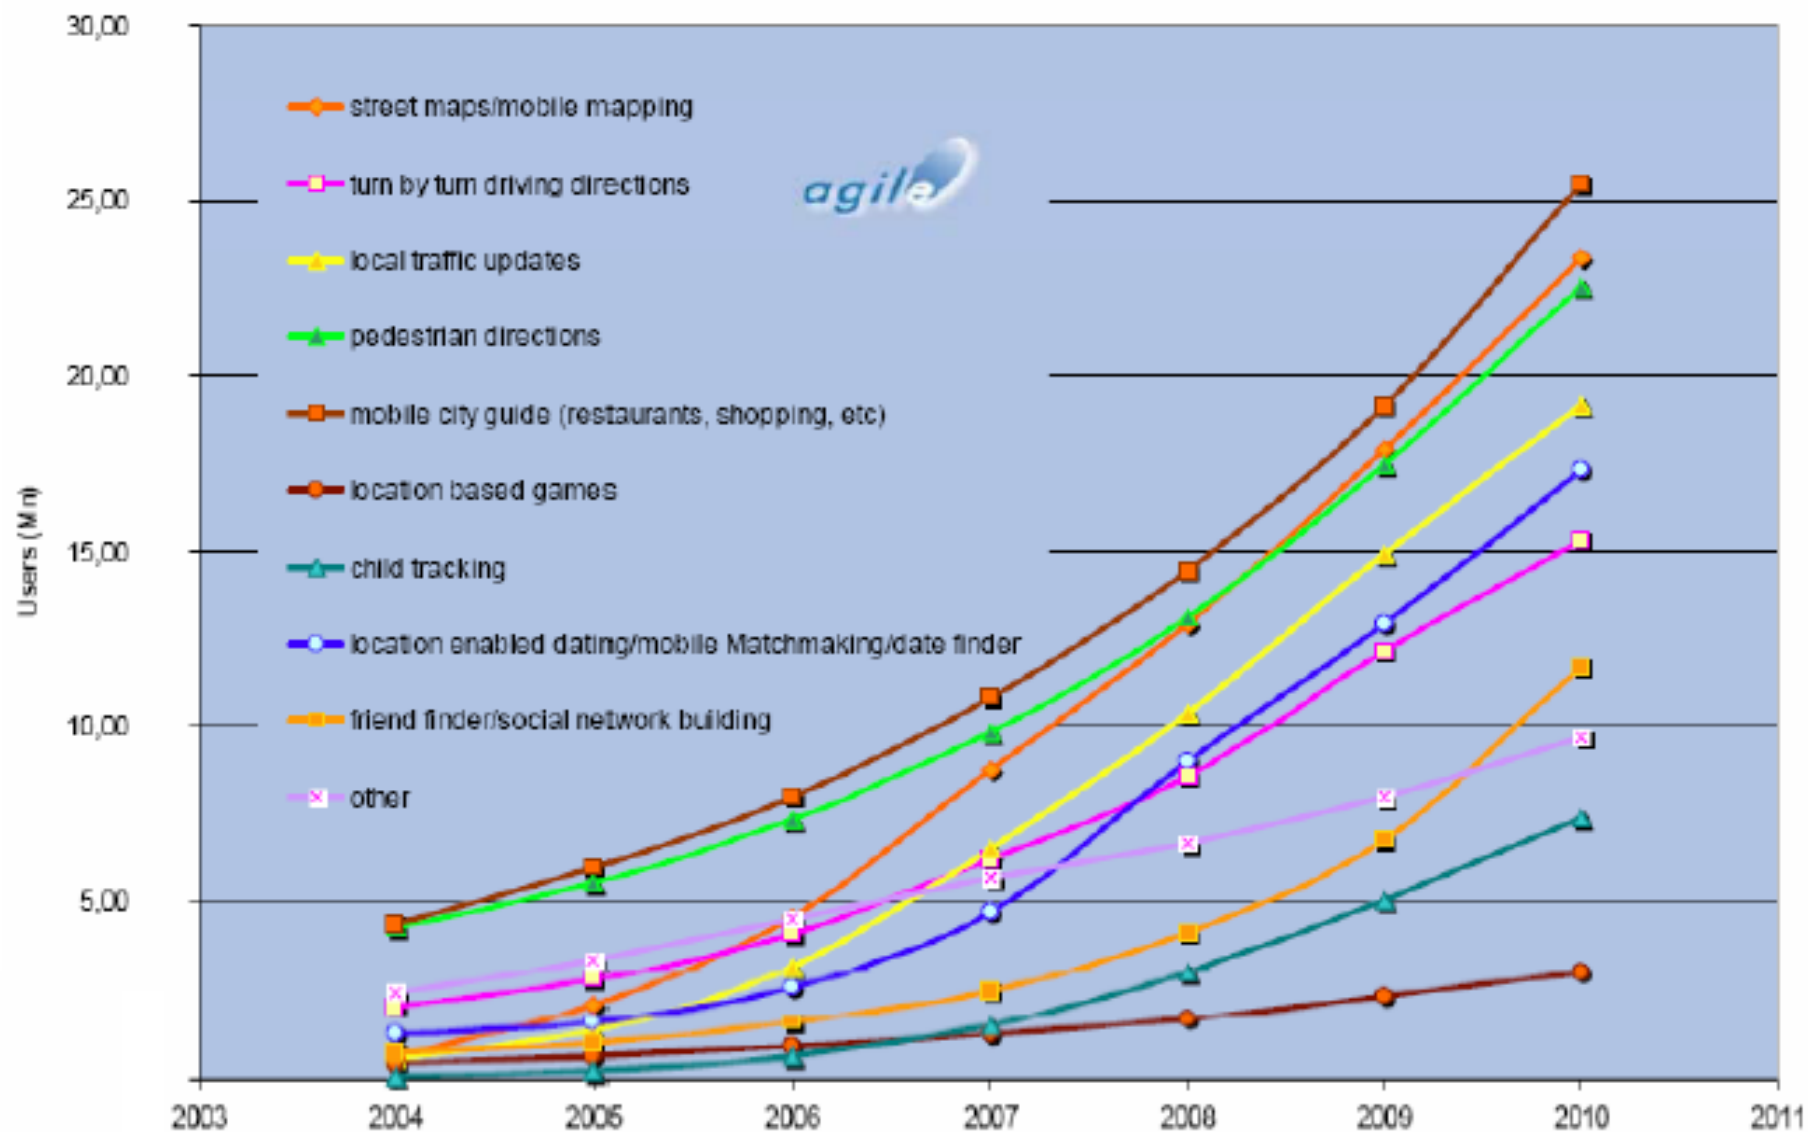

LBS Components and Information Flow

LBS Users

www.navsas.eu

LBS Users in Western Europe and North America

Some examples of location-based services

Requesting the nearest business or service, such as an ATM or restaurant

Turn by turn navigation to any address

Locating people on a map displayed on the mobile phone

Receiving alerts, such as notification of a sale on gas or warning of a traffic jam

For the carrier, location-based services provide added value by enabling services such as:

Resource tracking with dynamic distribution. Taxis, service people, rental equipment, doctors, fleet scheduling.

Resource tracking. Objects without privacy controls, using passive sensors or RF tags, such as packages and train boxcars.

Finding someone or something. Person by skill (doctor), business directory, navigation, weather, traffic, room schedules, stolen phone, emergency calls.

Proximity-based notification (push or pull). Targeted advertising, buddy list, common profile matching (dating), automatic airport check-in.

Proximity-based actuation (push or pull). Payment based upon proximity (EZ pass, toll watch).

Applications: Location Based Services

- 1. Emergency Services – Search & Rescue, vehicle break down location**
- 2. Navigation Services – Point to point route, Information on traffic etc.**
- 3. Information Services – Local maps, Notification of near by places of interest.**
- 4. Tracking and Management Services – Mobile supply chain management, Vessel/vehicle monitoring etc.**
- 5. Billing Services – Dynamically charge particular users of a particular service depending upon their location when using or accessing the service.**
- 6. Outlook – Augmented Reality – See-Through Devices: Usually worn on the head, overlay graphics and text on the user's view of the surroundings.**

Conclusion

After all, we need measurements of space and time for almost all our activities and LBS provides these.

Hence, LBS will influence our life more than any other technological advent.

köszönöm ! תודה dëkuji

mahalo 고맙습니다

thank you

謝謝 shie shie 谢谢 danke

Ευχαριστώ merci شڪرا

どうもありがとう *gracias*
