

# The GNSS Landscape in Pakistan

**SUPARCO**

Pakistan Space & Upper Atmosphere  
Research Commission

# Scope of Presentation

---

- Introduction
- GNSS National Landscape
- GNSS Applications
- GNSS Systems
- Conclusion

---

# Introduction

# Introduction

- Pakistan is pursuing space program through its National Space Agency SUPARCO (Space and Upper Atmosphere Research Commission) for:
  - Socio-economic development of the country
  - Introduction and promotion of space applications in the country
  - Development of a complete eco-system for provision of GNSS infrastructure, technology and end-to-end solutions

---

# GNSS National Landscape

# National Landscape

## Key Stakeholders

### Planning & Execution

Ministry of Planning  
Development & Reforms

Survey of Pakistan

### Public Sector Users

Pakistan Civil  
Aviation Authority

National Highway  
Authority

Pakistan Maritime  
Security Agency

### Commercial / Industry

Local presence of OEMs

Local startups of GNSS  
Services

### Academia

Institute of Space  
Technology

Institute of Business  
Administration

National University  
of Science &  
Technology

# National Landscape

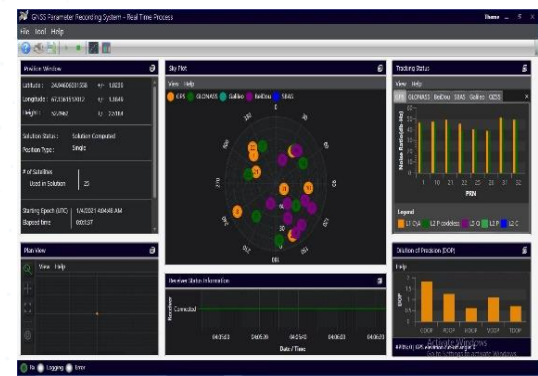

## Facilities

### iGMA Stations

- iGMAS (iGMA System) at Karachi city
- iGMA Station at Multan city

GNSS Signal Monitoring Station

GNSS Integrity Monitoring Analysis

### GBAS (Pilot Project)

- NRTK based system covering Karachi city
- Positioning accuracy of  $H \leq 04 \text{ cm}$ ,  $V \leq 08 \text{ cm}$

Service Coverage

---

# GNSS Applications

# GNSS Applications

**Surveying & Mapping**

**Transportation**

**Climate Change**

**Forestry**

**Agriculture**

**Wild Life Protection**

**Governance**

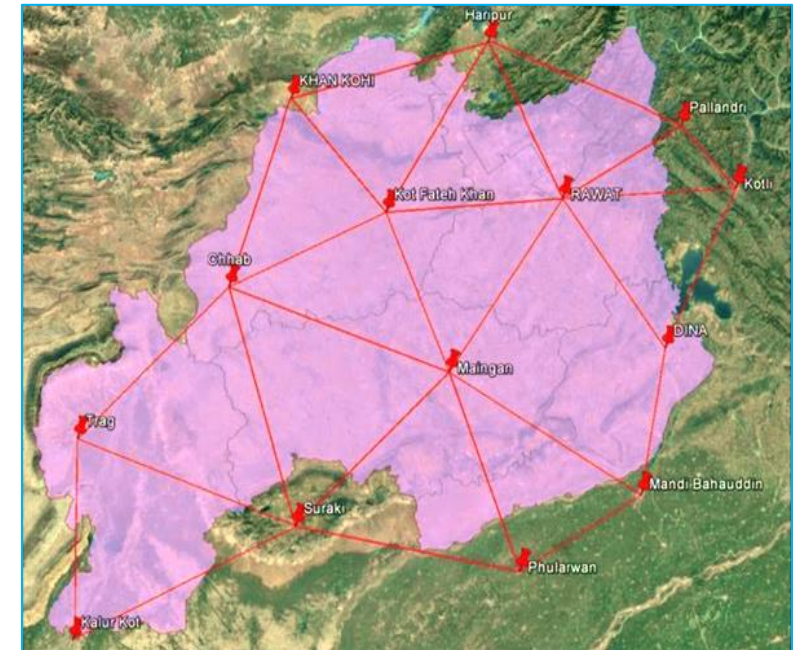

**Disaster Management**

# Surveying & Mapping

## Integrated Solutions for Managing and Conserving Water Resources

- RTK based GCP collection for accuracy enhancement of Satellite imagery generated DEM
- Identification of potential sites (approx ~8000) for construction of small dams (rain water harvesting)
- Economizing on the cost of surveys and the time required to undertake multi-criteria feasibility analysis

# Surveying & Mapping

## Highways

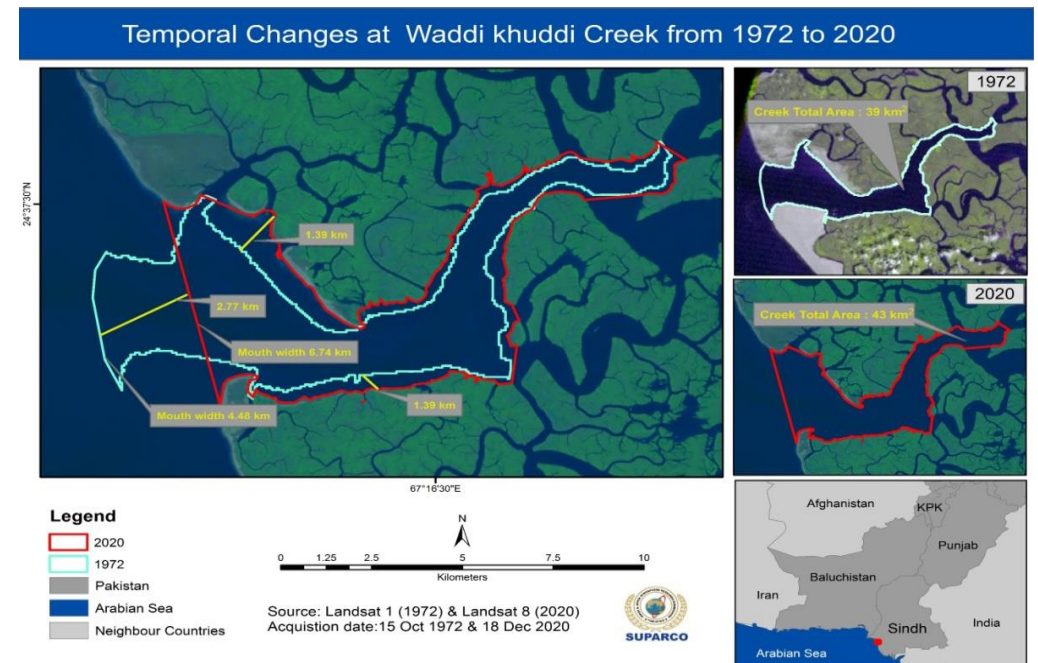

- GNSS drone based high resolution data acquisition for monitoring of national highways/ roads infrastructure with special focus on:
  - *Encroachments (natural, man made)*
  - *Road condition*
- Geo referenced aerial images later incorporated with satellite imagery for development of GSTA (Geo Spatial Temporal Analysis) portal for planning and development

# Surveying & Mapping

## Monitoring Sea Water Intrusion and Land subsidence

- National Institute of Oceanography, SUPARCO and Pakistan Council of Research on Water Resources are conducting research on Sea Water Intrusion and Land Subsidence along the Coastline
- Dev of GNSS aided high precision Digital elevation model for selected sites along coastline
- Installation of GNSS based stations for monitoring land subsidence (vertical shifting of land) along coastline

# Transportation

## Roads

- Govt. of Pakistan has undertaken development of Intelligent Transportation System (ITS) to reduce the congestions and CO<sub>2</sub> emissions on roads (<https://nha.gov.pk/>)
- User Services
  - Traveller Information
  - Traffic Management & Operation
  - Law Enforcement & Personal Safety
  - Emergency & Disaster Response Management
  - Electric Toll Collection System Conditions Monitoring

# Transportation

## Vehicle Tracking

- Private companies provide GPS based vehicle/ fleet tracking/ management solutions (<https://uniquetrack.com.pk>)
- Some companies provide solutions for safety alerts, rough driving alerts, geo-fencing alerts (<https://etracking.pk>)

# Transportation

## Location Based Services

- Location based services are utilized to enable advanced transportation system such as peer-to-peer ridesharing, ride service hailing, grocery/ food deliveries, etc.

<https://www.uber.com/pk/en/>, <https://www.careem.com/>  
<https://www.airliftexpress.com>, <https://keryana.pk/>,  
<https://dawaai.pk/>)

# Transportation

## Railways

- Pakistan Railways “Pak Rail Live” mobile application provides train tracking, arrival & schedule updates
- The data includes latitude, longitude and velocity of the trains
- GIS functions include Integration of the spatial data, Display the attribute data in a user-chosen format, and make digitized files

# Transportation

## Marine

- Pakistan Maritime Security Agency (PMSA) manages GNSS based Vessel Monitoring System (VMS) that enables round the clock real time monitoring of deep sea fishing vessels
- VMS is used by fisheries authorities, and coastguards for surveillance, search & rescue and resource management

<http://pmsa.gov.pk>

# Transportation

---

## Aviation

- Performance Based Navigation (GNSS based) Instrument Approach Procedures for instrument runways completed by Pakistan Civil Aviation Authority (PCAA) for airports
- Aviation System block Upgrade through SBAS and GBAS planned for future

(<https://www.caapakistan.com.pk>)

# Climate change

---

## Glacier Inventory

- The 'Third Pole' i.e. the Hindu Kush-Karakoram-Himalayan (HKKH) Region now a key concern for climate change
- A GNSS based study was undertaken for identifying glacier inventory (location, size and number) of the part of the 'third Pole' located in Pakistan

# Climate change

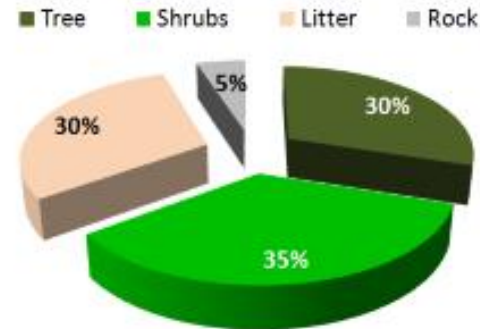

## Survey for Carbon Stock Assessment

- GNSS aided Aerial Imaging for Carbon Stock Assessment and forest health monitoring in Northern Areas of Pakistan
- SUPARCO conducted an International project to augment the present capacity and capability in handling advanced sensors data for forest carbon stock assessment

### PLOT INFORMATION

|                             |                  |
|-----------------------------|------------------|
| Plot ID: S-32               | Elevation: 1795m |
| Plot Radius: 0.13 ha        | Slope: 31°       |
| Dominant Species: Chir Pine | Aspect: 315°     |

### PLOT COMPOSITION

### Legend

- Settlements
- Forest

### Carbon Stock (tons/ha)

# Forestry

## National Forest Monitoring System (NFMS)

- Sustainable forest management by monitoring, reporting & verification using:
  - Satellite land monitoring system (SLMS)
  - National forest inventory (NFI)
  - National greenhouse gas inventory (GHG-I)
- GNSS technology is extensively utilized for:
  - Delineation/demarcation of forest compartment boundaries
  - Establishment of Ground Controls Points (GCPs) for covering the range of forest to be surveyed (<http://mocc.gov.pk>)

# Forestry

## Tree Plantation Campaign

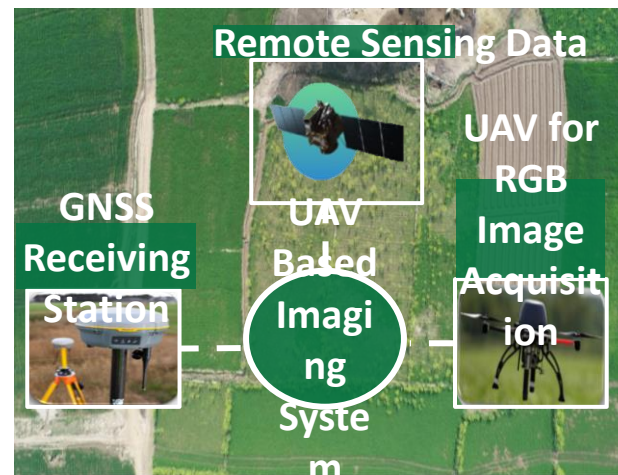

- A Provincial Government (KPK) implemented tree plantation campaign in 2015 in Chinar area to counter climate change challenges
- GNSS technology was utilized for calculation of the campaign area, ensure proper growth of saplings and tracing illicit cutting of trees

# Agriculture

## Data Driven Smart Decision Platform for Increased Agriculture Productivity

- GNSS aided High Resolution Aerial Imaging at Farms level (Multi-Spectral, Thermal, LIDAR, Hyper-spectral) for Acquisition of Actionable Intelligence for VRT based Agricultural Inputs (Seeding, Fertilization, Irrigation, etc)
- A collaborative project between SUPARCO and an Agricultural University

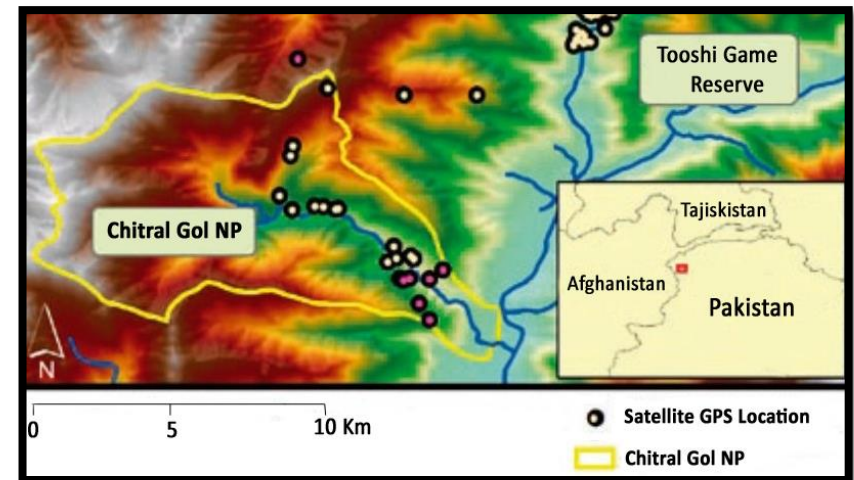

# Wild Life Protection

## WWF-Pakistan Project for Snow Leopards Protection in Pakistan

- Utilization of GNSS technology in leopard's movements and habitat use
- The collar programmed to take GPS fixes 03 times/day & uplink data via Argos Satellite System once every two weeks

(<https://wwf.panda.org>)

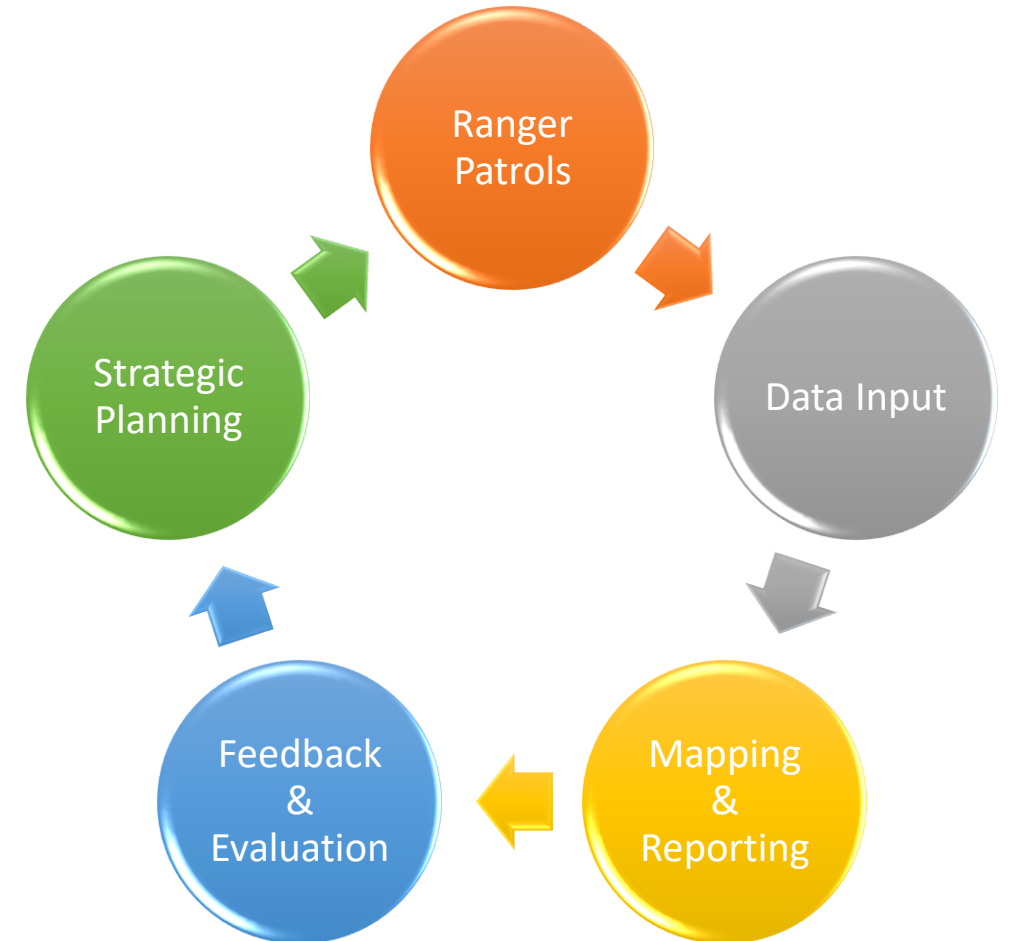

# Wild Life Protection

## Spatial Monitoring & Reporting Tool (SMART)

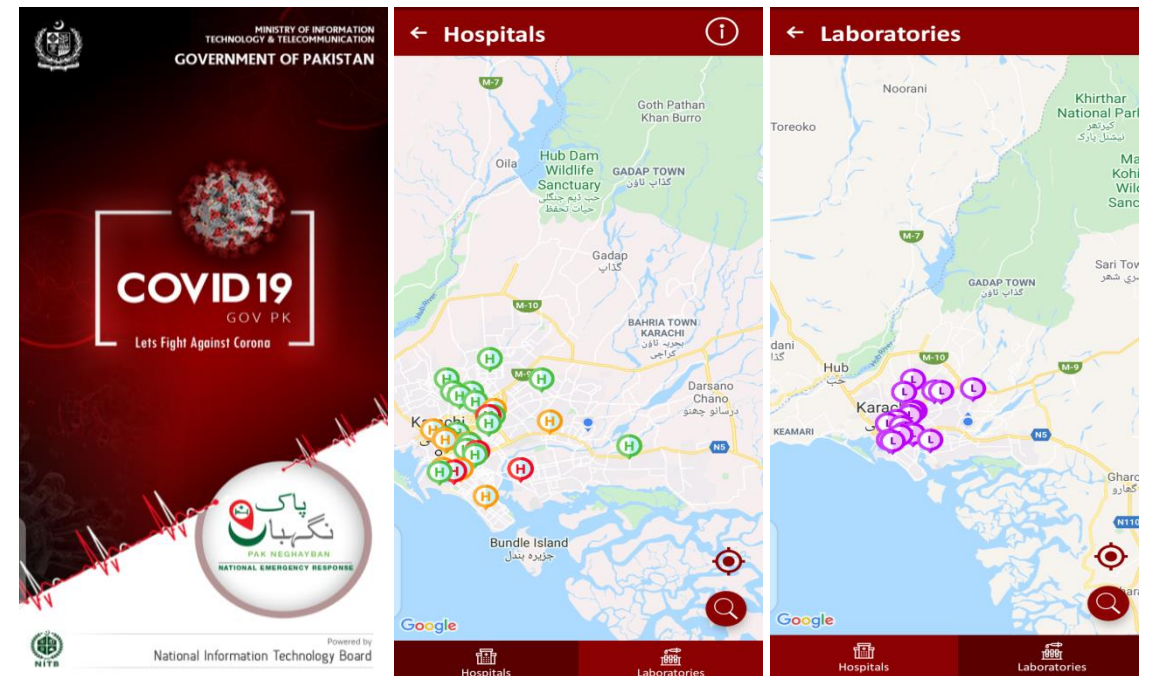

- To assist wildlife conservators and national park managers in patrolling and monitoring large areas
- GPS based SMART application uses geographical data collected by community for patrolling routes, and traces of animals
- SMART system implemented in Khunjerab, Central Karakorum & Margalla Hills National Parks

# Governance

## COVID-19 Emergency Response

- ‘Pak Neghayban’ mobile application allows users to locate hospitals with available beds and ventilators and find out labs conducting corona virus tests (<https://ncoc.gov.pk/govt-initiatives.php>)
- Multiple features to assist people in pandemic such as:
  - Hospitals Locations
  - Laboratories Locations
  - Corona Zones

# Governance

## Safe City Projects

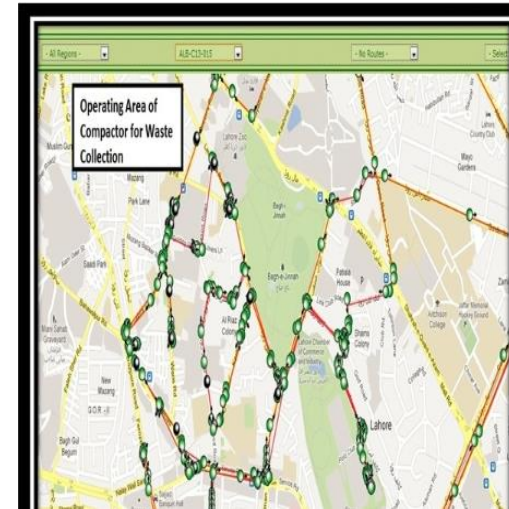

- Utilization of GNSS technology for resource location and emergency response management in Safe City Projects (<https://psca.gop.pk/>)
- Punjab Police has initiated Integrated Command, Control and Communication Center program which utilizes GNSS coupled with latest technology to improve operational efficiency

# Governance

## Waste Management

- A Provincial Government (Punjab) company uses GNSS enabled tablets operated by its field operators to indicate garbage location by providing real time geo-referenced images
- Central Control Station then directs nearest garbage collection vehicle to collect the garbage
- The field observer later transmits cleared area image to the Central Control Station

Vehicle Tracking System

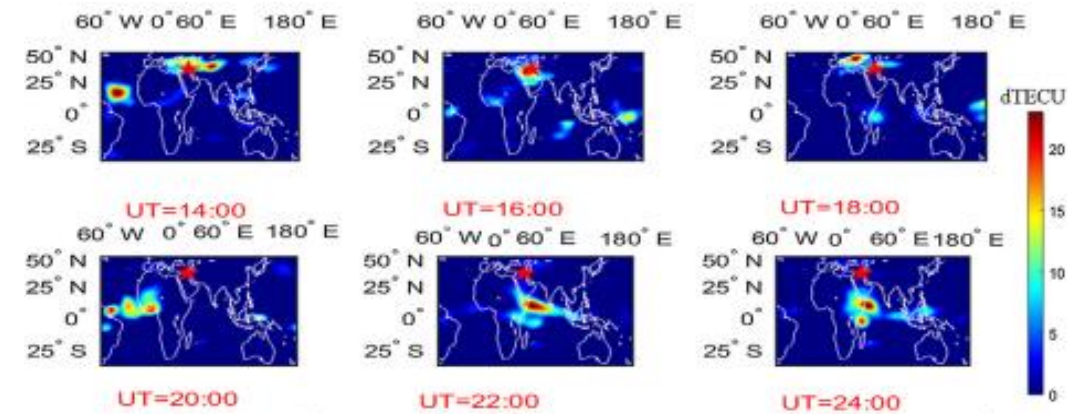

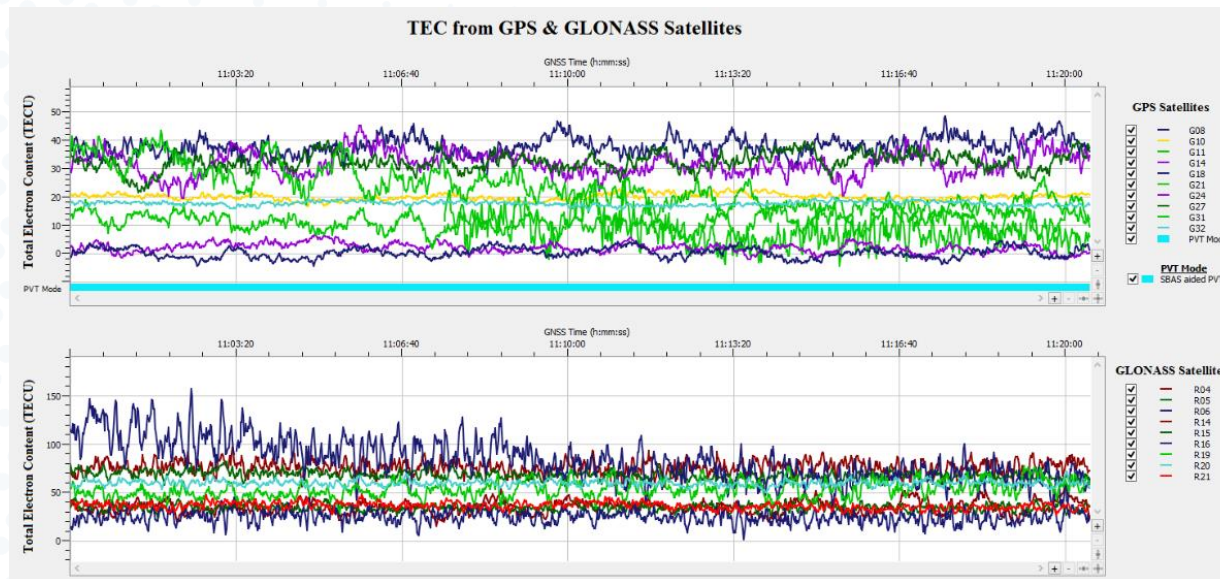

Android App based monitoring

# Disaster Management

## Earthquake Precursor

- GNSS based Ionospheric Stations established by Centre for Earthquake studies (CES) monitor the Total Electron Content (TEC) for potential earthquake precursor (<https://www.ncp.edu.pk>)

---

# GNSS Systems

# GNSS Systems

---

## Vision

- To develop GNSS Systems targeted for:
  - Socio-economic development
  - Safety of Life (SoL) services
  - Sustainable Development Goals (SDGs) achievement
- To promote GNSS applications in the country in every sphere of life
- To enhance national capacity building in GNSS research & development
- To foster international/ regional cooperation in GNSS development, operation and utilization
- To join and actively participate in the proceedings of International and Regional GNSS forums

# GNSS Systems

## Targeted SDGs

Agricultural Productivity

GDP Growth

Infrastructure Mapping

Urban Planning

Disaster Management

# GNSS Systems

---

## Development Phase

- New Generation National Geodetic Datum
- Space Based Augmentation System (SBAS)

## Planning Phase

- Ground Based Augmentation System (GBAS)
- Regional Navigation Satellite System (RNSS)

# GNSS Systems

- Kick off Aug 2021
- Space Segment
  - Paksat-MM1R (2024)
  - Paksat-2R (2026)
- Constellations
  - GPS, BeiDou (planned)
  - Galileo, Glonass (under consideration)
- Protocols
  - RTCA, DFMC, PPP
- Services
  - Public, Authorized

12 x RIMS

Ground Uplink Station

Data Processing Center

# GNSS Systems

## National Geodetic Datum

- Contract finalization in progress:
  - Horizontal Datum (16 GNSS CORS, 200 points first-class GNSS control network)
  - Vertical Datum (01 long-term tide gauge station, 01 leveling origin point)
  - Gravity Datum (10 absolute gravity station, 10 First Geodetic Leveling (FGL) stations)
  - Geodetic Datum Data Centre

---

# Conclusion

# Conclusion

---

- GNSS is indispensable for socio-economic development
- Pakistan's GNSS landscape is vibrant and poised to grow in future
- Pakistan is promoting and adopting the utilization of GNSS technology services and applications in the country
- Pakistan is striving to remain abreast with the GNSS technology spectrum and be part of the international forums shaping its future

---

**Thank You**
